## MADRID

Yellow Sweet Clover

This most remarkable variety of Sweet Clover is described in detail on page 14. The outstanding features are: (1) Strong seeding vigor, (2) Fast early growth, (3) High yield and liner plant structure, (4) Dark green foliage, (5) Later fall growth. All of these are desirable characteristics and that is why Madrid is rapidly becoming the most popular variety in this country.

What we want to stress, this is the finest quality of our seed stock. It is our World Brand grade. Whenever you see that grade quoted, you are getting a price on strictly top quality, extra fancy seed. It will have high purity of 99 3/4% to 99 7/8% and live seed 90% to 94%. It will be thoroughly cleaned, very free of weed seed. It is equivalent of Blue Tag Certified from a quality standpoint. No matter how critical you may be, we guarantee our World Brand to please you and remember it has Gro-Coat protection. It is the best money can buy.

WORLD  
BRAND  
NO. 90

## RANGER

ALFALFA

In making Blue Tag Certified Ranger (see page 7) a good deal of nice seed is removed in the grading process. Most of the seeds removed are smaller in size and some do not have the extra fancy color required for Blue Tag grade. Yet most of this is very serviceable seed. It comes from the identical lot iceable seed. We reclean this that makes Certified seed. We reclean this seed further and use it as the basis of our "Special" Ranger No. 28. It may contain some other non-certified seed but it is all Ranger alfalfa. While the germination per hundred seeds is lower, you get many more seeds per pound so the number of sprouts per pound is about the same as in Blue Tag. It's very much like our Honest John (page 9) which is so popular with our trade. Not fancy for looks but good in performance and low in price. See Item 28 on price list.

SPECIAL  
NO. 28

## Medium Red Clover

Lot Super Value is another one of our specials that can be bought at a deep cut price. The lower price, however, would mean nothing if you were not getting good value for your money. You wouldn't want it as a gift if it couldn't produce a good stand. You may ask "then why is it so much lower in price?" The answer is that this seed does not all have the bright color of our World Brand. It won't test as high in germination per 100 seeds but like our special Ranger there are more seeds per pound. It also contains around 2% of other agricultural seed. It is a seedling that can give you splendid results and you can reduce your seeding costs by using it. With Gro-Coat production there is added assurance of good stands. It is all hardy home grown seed. See Item 32.

BERRY SEED COMPANY • CLARINDA, IOWA  
WORLD'S LARGEST SEED HOUSE SELLING DIRECT TO FARMERS

# GRO-COATED<sup>®</sup> BRAND

## GUARANTEED SEEDS

**SAVE YOU MONEY-REQUIRES LESS SEED PER ACRE**

### WHAT GRO-COAT IS

It is a private chemical formula that is applied to seed in carefully regulated quantities. These chemicals kill diseases or fungi that often cause seed to rot in the ground. This varies according to soil and weather. It not only keeps the seed clean but also destroys the organisms that may be in the soil around the seed. In addition Gro-Coat contains a chemical designed to stimulate growth after the seeds have germinated.

This has been so astonishingly and sensationally successful for 10 years that many imitators have arisen with claims that they are the same as Gro-Coat. There is only one Genuine Gro-Coat Brand and now it is even better, see next page. It will pay you to demand the original Genuine Gro-Coat Brand. Now with CM957 added Gro-Coat is more effective than ever.

### WHAT GRO-COAT IS NOT

Some confusion has arisen as to just what Gro-Coat is. Some have the idea that it is something like inoculation. It is entirely different. You should inoculate Gro-Coated brand legume same as any ordinary seed.

Inoculate just before seeding. See page 15. Others think it is a sort of a fertilizer applied to give seed a boost at the start. Gro-Coat is in no sense a fertilizer. The new formula is a superior treatment.

Gro-Coated Brand seeds do generally get off to a quicker start and make faster growth but that is only because the seed is kept clean, free of disease rotting organisms that may either kill the seed while it is germinating or cause a weakened plant. Now with CM957 added Gro-Coat is better than ever.

### WHAT GRO-COAT DOES

**KEEPS SEED FROM ROTTING IN THE GROUND**

### WHAT THIS MEANS FOR YOU

#### 1. BETTER STANDS

More Gro-Coated brand seeds will make growing plants when seed rotting fungi are active in soil. You can get normal stands at up to 1/4 lighter seeding rate or better than normal stands at regular seeding rates.

#### 2. LONGER ROOTS

Our tests show longer, heavier roots in the same length of time from Gro-Coated Brand seed as compared with the same lot of seed not Gro-Coated.

#### 3. HEALTHIER PLANTS

Gro-Coat protection guards against fungi attacks that otherwise may kill or weaken the plants that start. Therefore the plants from Gro-Coated Brand seed generally are stronger, healthier and more vigorous growing.

#### 4. FASTER GROWTH

See photos below and on catalog envelope. Healthy plants, like young animals, develop more rapidly and they are the ones that make the most profits.

#### 5. BIGGER YIELDS

When you get better stands, stronger root systems, and healthy, fast growing plants, your yields are bound to be greater and that is exactly what our customers report. This is especially true when conditions favor fungi growth.

#### 6. LARGER PROFITS

You are farming for profit. When you sow Berry's Gro-Coated Brand seed, you have greater assurance of larger profits because of bigger yields in forage production, seed yields or green manure.

### IT IS THE MOST ECONOMICAL SEED YOU CAN BUY

While Gro-Coated Brand seed occasionally costs a little more per bushel, it actually costs less per acre because you do not need as many pounds or quarts. However, if you do want to sow at normal rates and if our seed then costs you more per acre, **WE Guarantee** that you will get better stands or you get that extra money back. See Guarantee below. You can't lose on a deal like this. We are not making empty exaggerated claims.

Your profits depend upon getting better yields in your fields. No matter what quality seed you sow, if it doesn't make plants, it is of little value to you. Large farming losses result from poor stands and seeding failures. Weather has influence on the amount of seed rotting that occurs. You can't control weather but you can control rotting by sowing Gro-Coated Brand seed. The new formula surpasses the old.

### THIS SHOWS RESULT OF GRO-COAT PROTECTION ON PLANTS

#### Up to 700% Increase in Stands

Actual field results during the past 10 years have proven the distinct superiority of seed protected by Gro-Coat. Photo on right is a Red Clover field on the farm of Herbert Wilson of Redfield, Iowa. He split his drill box, using Berry's Gro-Coated Brand seed on one side and high grade home grown seed on the other. Our Gro-Coat seed produced 14 plants per square foot, the others 2. The results are not always that spectacular, but increases of 30% to 150% are common. Think what that means to you in extra profits and lower seeding costs. It has been proven on tens of thousands of farms. Try it, but be sure you get Genuine Gro-Coated Brand. It is the most satisfactory seed you can use. And — it's the most economical. See paragraph on other side of picture.

### GUARANTEE

We guarantee that our Gro-Coated Brand Grass and Legume seed will give you better stands than any other commercial seed of similar quality, sown and grown under the same conditions. If it does not, we will refund you any extra seed cost per acre that you invested in our seed. Reports on stands to be made within 60 days after seeding. Legume seeds are to be inoculated. See Page 15. All Gro-Coated Brand seeds are treated with our Gro-Coat formula of seed disinfectants.

#### Savings in Seeding Costs

It costs money to apply Gro-Coat material. The chemicals are expensive. It requires extra labor. It does add a little to the cost of the seed, but it actually costs you less per acre. See paragraph above. We might use an ordinary fungicide but then even if we gave it to you without cost you would be the loser. You definitely can cut your rate of seeding when you sow Gro-Coated Brand Seed.

#### HERE'S HOW IT FIGURES

**Red Clover**  
Non-Gro-Coat, 8 lbs., @ 50c = \$4.00 per acre.  
Gro-Coated Brand, 6 lbs., @ 53c = \$3.18 per acre.

**Alfalfa**  
Non-Gro-Coat, 12 lbs., @ 45c = \$5.40 per acre.  
Gro-Coated Brand, 9 lbs., @ 48c = \$4.32 per acre.

You'll always save money in all ways when you sow Berry Gro-Coated Brand Seed.

#### LOOK FOR THIS SEAL

This Blue Metal Seal and the Diamond shaped Gro-Coated tag on the right are attached to all bags containing the genuine Gro-Coated Brand seed. They are for your protection against fraud or substitution. Be sure to demand this evidence.

# Save Your Machinery — Protect Your Products

## With the Strongest — Lightest Weight — Longest Lasting

### Most Economical-Double ply-Dacron Reinforced Plastic

#### HERE'S THE SECRET OF ITS GREAT STRENGTH

##### Floating Dacron Strands

These incredibly strong fibers are not a woven cloth. When a tearing force is applied these strands bunch together, making the plastic virtually rip-proof.

##### Patented Adhesive Process

It took two years of experimenting to develop an adhesive that would firmly hold the two plastic sheets together and remain tacky and pliable at all weather temperatures. It also required the design of a machine that would lay these Dacron strands between the two sheets as they were being laminated together. It was a costly development program but the end result was a plastic fabric that has properties that you cannot find in other material under the sun. The technical name is Griffolyn.

# Weather-Gard

TRADE MARK

## NO. 101

- Rip-proof
- Does not absorb water
- Does not shrink
- Does not rot
- Remains pliable at all temperatures
- Resists acids, such as in fertilizers
- Easily repaired at home if necessary
- Weighs only 7½ oz. per square yard
- All brass grommets thoroughly reinforced
- **GUARANTEED TO PLEASE YOU**

Water tight

Resists sun's heat

Easy to handle

## Can be fabricated into any shape or size you may need

#### Only Griffolyn Plastic Combines These Features:

Weather-Gard No. 101 is made out of Griffolyn. The process of making it is discussed briefly above. The outstanding features are also stated above. Everyone of those statements are facts. If you have anything to cover up, No. 101 will do it better and last longer and in the end will be the cheapest you can buy.

You know what happens to canvas. Unless you get flimsy light weight canvas it's heavy to handle. When it gets wet, it gets heavier and shrinks. If you have it tied down, it gets tight as a drum and sometimes pulls itself to pieces. If you want to store it, you have to dry it or it will mildew and rot. It has a rather short life. If you poke a hole in it, you have to take it somewhere to get it fixed.

Weather-Gard No. 101 is far better. Read again what we say about it above. Consider what that means to you. Its light weight enables even a youngster to cover up all but the biggest trucks. Farm machinery left unprotected deteriorates rapidly. Cover it with Weather-Gard No. 101 and you protect it even better than if it was in a shed or garage, as a close fitting cover keeps out more dust. Protected machinery lasts much longer. Repair bills are reduced and trade-in value increased. Most farmers buy straight flat shapes so they can be used for a variety of purposes.

It is possible to punch holes in Weather-Gard No. 101 but with every tarp we include patching tape so you can quickly repair it at home. This tape can also be used to reinforce against sharp edges. You can buy plain Polyethylene at much lower price. It comes in different weights. The lighter weights are of little practical value. We can supply the 4 and 6 mill weights at low cost, see below. However they cannot begin to compare with our No. 101 in strength or long life. Our No. 101 will really take it and we can supply it in almost any size or shape. We guarantee you will be pleased. If you are not, return it after examination and your money will be promptly refunded.

Use it to cover:

**TRUCKS**  
**TRACTORS**  
**SILOS**  
**AUTOMOBILES**  
**BOATS**  
**AIR CONDITIONERS**  
**BUILDING MATERIAL**  
**HAYSTACKS**  
**ALL FARM MACHINERY**  
**and everything**  
**you want to**  
**protect against**  
**the weather**

#### Rubber Tie-Downs for Canvas Tarp

Canvas tarps, and ropes to hold them, shrink when wet, making them tight as a drum. This often causes tarps to tear. With our reinforced pure rubber tarp fasteners, your tarps will always be tight but never too tight. Can be permanently attached by closing hooks with heavy pliers. Price, postpaid 21" length, \$1.20 each, 4 for \$4.00. Price, postpaid 31" length, \$1.60 each, 4 for \$5.25.

**Also ideal for Weather-Gard Tarps**

#### Prices on Plain Polyethylene

We handle only the heavier 4 mil and 6 mil weights. Comes in 100 ft. rolls. Prices F.O.B. Clarinda, 4 mil weight, 16½ ft. wide, \$27.50. 4 mil weight, 20 ft. wide, \$33.00. 6 mil weight, 20 ft. wide, \$51.60. For shorter than 100 ft. lengths prices per foot is 3c per foot higher than in 100 foot. For tie-down clamps for this material, see page 22.

#### Write for Prices on Special Form Covers

If you want a cover made to cover a certain item such as a tractor, boat, auto, etc., write us, giving dimensions desired. Or make a rough sketch like a boat and mark length and width at various points so cover can be cut to fit. We'll tell you about any additional information needed and quote you a price on the finished product, postpaid.

#### Prices Straight Tarps Weather-Gard No. 101

Approx. Size	No. Brass Grommets	Delivered Price	Approx. Size	No. Brass Grommets	Delivered Price
6x8	16	\$12.00	8x10	20	\$19.60
6x9	16	13.50	8x12	24	23.00
6x10	16	15.00	8x14	22	25.70
6x12	22	18.00	9x12	20	25.15
7x9	16	15.75	12x16	28	42.60
7x10	18	17.50	16x20	36	75.00

Figure any other size at 25c per sq. ft. Large sizes slightly lower. All grommets are placed in heavily reinforced shoulders.

## Suggestions on Seedings on Conservation Acres

Regulations differ in many states and even in different counties within a state. It is well to consult with your local A.S.C. Committee. The basic thing is that if you keep it seeded down for the number of years you sign up for — 3, 5, or 10 years. If you sign up for 5 years and your seeding is gone at the end of 3 years, you will have to reseed if you want payments to continue. In Page County, Iowa, you would be paid 60% of the original seeding cost but you will not be paid anything for any reseeding you may have to make. Therefore, it will pay you to sow long lasting seeding.

The following are 6 mixtures that were recommended for Iowa in 1959.

1. 5 lbs. alfalfa, 3 lbs. red clover, 6 lbs. brome.
2. 6 lbs. alfalfa, 6 lbs. brome, 5 lbs. orchard grass.
3. 4 lbs. trefoil, 2 lbs. timothy.
4. 4 lbs. trefoil, 3 lbs. orchard grass.
5. 8 lbs. brome grass, 5 lbs. orchard grass.
6. Reeds canary grass.

There are many other long lasting seedings you can make. Be sure to study our catalog. Sow only Gro-Coated Brand seed, so you will have the best possible results from your seeding. See our price list.

# BERRY SAVES YOU MONEY

## IT WILL PAY YOU TO STUDY THESE EXTRA DISCOUNTS AND SPECIAL OFFERS FOR 1958

### QUANTITY DISCOUNT ON FARM SEED PRICES

It is much more economical for us to process and fill orders for larger quantities. Therefore, we feel that customers who buy in larger quantities are entitled to such savings. If your own requirements do not run to these quantities, we suggest as mentioned below that you get some of your friends to order with you.

The discounts as given here apply to farm seed prices only. There are other discounts on orders for garden seed and nursery stock as shown below. Figure those discounts separately. Do not take discounts on those items and then add them to your order and then take another discount.

Figure your farm seed order and take that discount. Figure your discount on garden seed and nursery stock separately. See example listed below.

Quantity discount on farm seed ordered before April 1, 1959.

There is no discount on orders for less than \$200.00.

Order for \$200.00 to \$399.99...Discount is 2%  
Order for \$400.00 to \$599.99...Discount is 3%  
Order for \$700.00 to \$999.99...Discount is 4%  
Order for over \$1,000.00.....Discount is 5%

These quantity discounts apply to prices in effect at the time you place your order. A price list is enclosed with the catalog when it is mailed out. We try to protect those prices throughout the season but that is not always possible. Sometimes we get sold out of some seed and if we have to replace it on the basis of higher markets, we reserve the right to change prices. If there should be changes we will, unless the advance is large, ship and write you for the difference. If that is not satisfactory, tell us when you place the order that you want us to write to you before shipment in event of any price changes. The probabilities are that there will be few, if any, changes in prices.

**These Discounts also apply at places where we have  
Retail Stores**

See upper right hand column for information on map. Our prices are rail freight prepaid in all of the center white area and in the shaded pink area shown on map, providing your order is for 300 pounds or more. In any other part of the nation we ship charges collect but you may deduct \$1.25 per 100 lbs. from current price list and keep that as an allowance to apply on freight charges.

### SPECIAL DELIVERY SERVICE on Early Orders

In open area in center of map (opposite column) we will deliver by our truck (if you live over 40 miles from any of our retail stores) to whatever town you specify providing your order is for 300 pounds or more and is mailed to us on or before March 10, 1959. You will also have to state on your order what place in that town you want us to have the shipment delivered. This may be some oil station or any place of business that is willing to accept and hold the seed for you. Our truckers are instructed to mail you a card when they make such delivery.

In order to give this service it is necessary for us to accumulate sufficient orders to permit routing of a truck load. Therefore there may sometimes be a short delay in getting the order started but it will get to you much faster. You can see that the earlier you send your order, the sooner we can route a truck your way. If our trucks cannot be routed your way within a reasonable time, we will ship order by rail, freight prepaid, to station nearest to you where delivery can be made and you will be so advised.

Now, if your order is for 300 pounds or more but you send it in after March 10 or if you live in the center or shaded area shown on the map, we will ship the order, rail freight charges prepaid, no matter on what date you order. If you live outside the area indicated or if your order is for less than 300 pounds, you may deduct 1 1/4¢ per pound or \$1.25 for 100 pounds, from the prices quoted on our latest price list. In event you want your 300 lbs. or larger shipment made by some commercial truck line instead of by railroad freight, then all such shipments are sent collect but we will refund what the rail freight charges would have been.

### COMMERCIAL TRUCK LINE SHIPMENTS

On page 5 there is a paragraph on Prepaid Shipments and Freight Allowances. We want to make it very clear as to how transactions are handled, that go by commercial truck lines. It is difficult to figure local truck rates as they vary more than local Railroad freight because different truck lines do not all have working rate agreements with connecting lines. Therefore, we do not prepay the transportation charges on a truck shipment. Instead we refund you the amount that the transportation charges would have been if we had shipped it by rail freight to your nearest station. You can apply this refund to pay the truck charges which sometimes are less and sometimes more than rail freight. This applies only in areas which have full freight coverage as described on map opposite page. Otherwise you may deduct \$1.25 per 100 lbs.

## GARDEN AND NURSERY OFFERS

### MARKET GARDENERS

#### BIG SAVINGS ON YOUR SEED BILL

We have a special market gardeners price list, for those who use seeds in relatively large amounts. You can get big quantity discounts on the finest quality that money can buy.

This list includes most varieties described in this catalog and many additional varieties that we have available. Our stocks are large and guaranteed of high germination. You can have them either GRO-COATED with our GRO-COAT protection or without. Gro-Coat helps to keep seeds from rotting in the ground and makes a better stand, healthier plants, faster growths, and bigger yields.

For seeds of the newest varieties and the finest of the old reliable kinds, be sure to contact us. You will be delighted with the quality and the savings you can make.

**Ask for Our Market Gardeners Price List**

### Quantity Discounts on Garden and Nursery Orders

On all garden seed and nursery stock listed on pages 24-36 in our catalog inclusive, you can take either the cash discount or the gift item described below, depending on the total amount of your order for all items, pages 24-36 of catalog. This discount offer must be figured by itself. It cannot be combined with farm seeds.

Group your order with your relatives, friends, or neighbors for maximum discounts and savings.

Order for \$ 5.00 to \$ 9.99 — 4% discount

Order for \$10.00 to \$24.99 — 6% discount

Order for \$25.00 or more — 7% discount

Figure the total amount of your order and deduct the discount that applies.

### OR FREE GIFTS WITH LARGER ORDERS

If you prefer, you can select the following gift in place of the cash discount. You cannot get both discount and gift.

Order for \$ 3.00 to \$ 4.99 — 1 Pkt. Berry's Early Hybrid Tomato; value 25¢.

Order for \$ 5.00 to \$ 9.99 — 1 50¢ Pkt. Petunia, your selection.

Order for \$10.00 to \$24.99 — 1 Crimson Glory Rose; value \$1.25.

Order for \$25.00 or more — 1 Dwarf Delicious Apple; value \$3.95.

**ALL PREPAID PRICES**

**All Discount and Gift Offers Expire May 10, 1959**

# BUY GRC-COATED Seeds Direct by Mail

BRAND

## 10 Modern Stores

Many customers drive over a hundred miles to our stores to buy their seed. You can see the many different kinds available. You will find a much wider selection available to you than in most seed stores. You'll find it well worth your while to make the trip.

Most other stores have farm dealers available to serve you if you prefer to order in this manner rather than driving into the store where it is of considerable distance. We suggest in that case you write the store for the name of the dealer and have him contact you promptly. Prices through the farm dealers are the same as in the store itself, which store prices as mentioned elsewhere are in line or lower than the mail order freight prepaid prices in the states where stores are established.

If you can drive to a store and do business personally, we recommend it as our store managers are trying to solve your problems particularly in relation to seeds but are also qualified to advise you on other farming operations, too. You will find the welcome sign always out and the store personnel always willing to be of service in any way possible.

### Store Locations

We have two stores: 420 North Main Street; West Chicago, Ill. and 2801 North Vermillion St. on Highway No. 1 and two in Iowa: Boone, East on Highway No. 30, and Clarinda, on Highways 71 and 2, three miles East of Square. Also Kokomo, Indiana, 1/2 mile east of by-pass on Highways 22 and 35. Also Ebel Seed Co., Falls City, Nebraska.

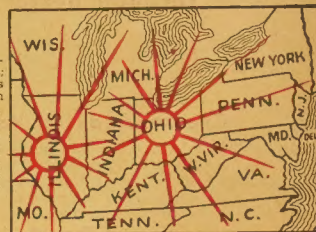

## and SAVE MONEY

Tens of thousands of farmers order their seeds direct by mail from Berry's. Here you get a wide selection. Seeds tested and labelled according to your state's noxious weed law and guaranteed to produce better stands. They are the cheapest and most satisfactory seeds you can buy.

### 3 SHIPPING POINTS

For quick service and lower shipping costs, farm seed orders are shipped from Clarinda, Iowa; Streator, Illinois; and Marion, Ohio. Be sure, however, to mail all orders to Clarinda, Iowa, and any correspondence relative to an order placed should be mailed to Clarinda. We will ship from the warehouse point that will give you the best service. We give special quotations at any time to large quantity buyers. Be sure to write as we want to save you everything possible in serving you on Grc-Coated seed needs. Remember, too, that on most seed grains our prices at our retail stores are often lower than freight paid mail order prices.

### HOW TO ORDER

If you have one of our regular order blanks, use that. If not, any sheet of paper will do. Give your full name and complete address and tell us as to what station to ship to and whether you want shipment made by freight, truck, parcel post or express. Give further instructions below. Please send check or money order with your order to assure quicker service. Sometimes some lots of seed become sold out and unless you mark your order, "No Substitution," we will send you the nearest thing to it and either refund you the difference in price or bill you for the difference. Please specify item Number shown with the description as that helps to avoid errors in filling orders. We try to protect prices as long as we can. Prices may be subject to change as noted on the price list. (MAIL ORDERS TO CLARINDA, IOWA, ONLY, TO AVOID DELAY.)

### ALL SEEDS TESTED AND LABELLED

We have a very efficient seed testing Laboratory and all of our seeds are tested and labelled and shipments made in accordance with the Federal Seed Law. This will tell you exactly what you are getting and the shipment, of course, is guaranteed to be satisfactory as explained in the guarantee below. We, in every way, make it to your interest to buy by mail because you save money and are guaranteed satisfaction.

### FREIGHT PAID PRICES

#### OR LIBERAL FREIGHT ALLOWANCE

The prices shown on the enclosed price list are rail freight paid into the center or shaded areas shown on the map on page 4, providing your order totals 300 pounds or more in weight. If your shipment weighs less than 300 pounds or if it goes into any other area than indicated on the map, then, when you make up your order, you are permitted to deduct \$1.25 per 100 lbs. or 1/4c per pound from the prices as given on our current price list. The shipment will then come by freight collect but you can take the \$1.25 allowance to apply on those charges.

#### Truck Shipments

It is more difficult to figure truck transportation charges as explained on previous page under the heading "commercial truck line shipment." We send truck shipments with charges collect but will refund what rail freight charges would have been to your nearest freight station.

#### Exception on Early Orders

See opposite column headed "special service on early orders." In the areas designated we can in most cases deliver by our trucks with all charges prepaid. Of course, orders must be for 300 pounds or more and should reach us by March 10. If possible to route full trucks after that date we will do it but that cannot be assured. Be sure to read the article on page 4 carefully.

### Bank References

You may check our financial responsibility with any of the following banks where we carry accounts or any other banks or commercial references.

Harris Trust & Savings Bank, Drovers National Bank, City National Bank, and Northern Trust Company of Chicago; Iowa-Des Moines National Bank and Capital City State Bank of Des Moines, Iowa; National Bank of Commerce, Lincoln, Neb.; Bank of Madison and National Bank of La Crosse, Wis.; First National Bank of Crystal Lake, Iowa; Page County State Bank and Citizens State Bank at Clarinda, Iowa.

### GUARANTEE

We guarantee to save you money, considering quality. If upon receipt of your order, you are not entirely satisfied, you can return it collect and all costs will be promptly refunded. Or you can keep it 60 days and have the seed it is good and that you have saved money not pleased, you can return the shipment collect and have all money refunded. You must be satisfied and we guarantee to save you money.

### CATALOG AND STORE PRICES

You will receive a price list with this catalog. If it becomes mislaid or outdated, drop us a card and we will send you another price list promptly. These prices are freight paid or have a freight allowance as explained in the adjoining column. We protect these prices as long as we possibly can but they are subject to change.

Prices in our retail stores listed in the upper left hand corner of this page are the same as our freight paid prices. We cannot allow freight when you pick up seed at the store because the cost of handling business in stores is higher. However, on most seed grains store prices will be lower than freight paid mail order prices.

### How to Ship

We recommend freight or truck service. On small shipments up to 50 pounds perhaps, express or parcel post is best. Parcel post is generally cheaper than express. On parcel post shipments, figure on amount of postage from opposite table and include that in your remittance. If you want the seed shipped by truck, try to give the name of the truck line and find out if they have a truck depot at your station. Many truck lines serve small towns but have no depots, and in such case you should give the name of some storekeeper or local dealer to whom the seed could be delivered. If there is no freight agent at your depot, it is best to ship to nearest town where there is one. We do this unless instructed otherwise.

### PARCEL POST RATES

Use the above map to figure what zone you are in from Clarinda if you are ordering something that is not post-paid and figure at the following rate:

1st lb. cost	All add'l lbs. cost	1st lb. cost	All add'l lbs. cost
Zone 1.....23c	4c	Zone 4.....24c	7c
Zone 2.....23c	4c	Zone 5.....26c	9c
Zone 3.....23c	4c	Zone 6.....28c	12c

Be sure to add to your remittance the amount necessary for postage unless the item ordered is marked postpaid. Check with local post office for rates from Streator, Ill., or Marion, Ohio. Above rates subject to any change in postal regulations.

# HOW YOU CAN GET BETTER STANDS OF LEGUME AND GRASS SEEDINGS...

## By Using Gro-Coated Seed and the Right Cropping Practices, You Increase Your Profits Through Better Stands, Higher Yields, Healthier Plants and Faster Growth

Chemical protection of seed from fungus organisms, which attack seeds and destroy their ability to germinate and produce a living plants, is your best assurance of protecting your investment in seed, fertilizer, seed bed preparation, seeding costs, etc. Only Berry's Gro-Coated seeds give you the benefit of years of research as to the best formulation and the guarantee of a better stand. See page 2 and color pictures on our catalog envelope.

### Choose Adapted Varieties and Types

Berry's offer only varieties and types of legumes that are known to have desirable characteristics for specific soil and rotation needs. For example, Ladino and Alsike Clover perform better on the wetter soils. Choosing the right legume and grass combination for the soil and intended use can mean the difference of success or failure.

### Seeding a Blend or Mixture Is Best

You can never accurately predict the weather which will follow after you have completed your seedings. Different legumes and grasses prosper under somewhat different conditions. Thus, a blend of two or more varieties; or a mixture of alfalfa and clover can well mean having some legume present to a greater extent than, if you had seeded either alone. Mixtures of legumes and grasses have many advantages, provided that they are compatible mixtures and not "potluck." See page 13 for Berry's field proven mixtures. Your attention is especially called to pages 8 and 9 for revolutionary news of Berry's Special Purpose Alfalfa Blends.

### Legumes Need High Lime Level and Inoculation

A soil test will determine whether your soil is sweet or acid. Legumes grow best in a sweet soil. More often than not poor stands result from soils that are so acid the seedlings cannot survive. Test your soil and be sure. Always inoculate legume seeds. See page 15.

### Fertilize According to Soil Tests

Starvation shortens the life and lowers the productivity of your legume stand. Phosphate is usually the most needed element in Corn Belt soils. Legumes thrive on plenty of phosphorus with or under the seed. Berry's store manager is familiar with different soil types and their deficiencies and will recommend a complete fertilizer including trace minerals.

### Pasturing the Nurse Crop Pays

Winter grains very often make such rapid Spring growth that legume seedlings suffer from shading. This is especially true with alfalfa. Pasturing up to the jointing stage of the grain is a very profitable livestock practice. In recent years many farmers are harvesting the grain in the milk or dough stage as silage. Proper pasturing of Spring or Winter grains never damages a seeding; far too many seedings have been killed by too much grain.

### Sow Your Seed Carefully

More seeds grow when covered to a depth of less than 1 inch. Seed sown deeper is usually lost. A firm, fine textured seed bed provides your best chance of seed placement at the proper depth and allows each seed to be firmly in contact with the soil around it. Don't waste seed. See the sowing chart at the bottom of this page for the proper seeding rates.

### Don't Smother Your Seeding

Most legume seedings are made in companion crops of small grain. These nurse crops are a source of further return in the year of seeding and protect the seeding from weeds, which give no return, and are undesirable in the seeding. Over-planting of the companion grain crop will result in a heavy stand which can easily smother out or hinder growth of your legume seeding.

### Split Seeding an Advantage

In many areas farmers follow the practice of splitting their seed and making two sowings. The most favorable planting date varies from year to year; thus, seeding half of the seed at the earliest favorable opportunity and seeding the remainder two or three weeks later is good insurance, though it does take more labor and machine use. Earliest seeding can be made when all of the frost is out of the ground, even though light freezing occurs at night.

### Early Seeding Pays Off

Sowing your seed at the earliest time favorable conditions exist allows your seed to germinate under the most ideal conditions. When the frost is out and occasional light freezing occurs at night most soils will honeycomb on the surface and to an extent cover seed still on the surface. Plenty of moisture exists in the surface soil eliminating the danger of the seeds being killed by drying or exposure. Under these conditions Gro-Coated seed is protected from disease organisms that thrive under cool, moist conditions.

### Drilling Is Better Than Broadcast

Field trials and experience prove the superiority of drilling legume seed. Seed drilled will give a better stand than seed broadcast the same day; if conditions will let you get a drill in the field. All seeds need some cover.

## USE ONLY THE ORIGINAL GENUINE GRO-COATED BRAND SEED

## WEIGHTS AND SOWING RATES

The following table gives pounds per standard bushel for most states. There is some variation between states and all seeds do not have standard weight in all states. There are no standard weights at all for some seeds. The depth of covering seeds will vary according to soil types, and average rainfall. In dry areas and looser type soil, deeper coverage may be desirable for some crops. In more humid areas it is normally best to give grass and clover seed only a shallow covering. Rolling after seeding is usually very helpful in getting stands.

Lespedeza Sericea	60	10-12	14-18	Middle to Late Spring	372	Sudan Grass (Drilled)	40	15	20	May - June	9
						Timothy	45	8	10	Spring or Fall	11
						Vetch, Winter	60	20-22	25-30	June - Sept.	
						Vetch, Spring	60	40-45	50-60	March - April	
						Wheat, Spring or Winter	60	1 1/4 bu.	1 1/4-1 1/2 bu.	Fall	

The reason we give a lower rate of seeding for Gro-Coated Seeds is that more seeds will make growing plants. A good many farmers, however, prefer to sow at the regular seeding rates in order to get heavier than normal stands.

Berry's special mixtures carry our suggested seeding rate. See catalog descriptions.

# VERNAL

## The NEW Wilt Resistant Alfalfa

This is the most outstanding Alfalfa in the nation today. It is especially so in the northern and central states. It combines extreme winter hardiness, the highest degree of wilt resistance with extra ordinary production. In Iowa Official tests, Vernal has outyielded Ranger, Buffalo, Ladak and Grimm by almost 15%. Wisconsin tests shows it head and shoulders above all others. It has greater winter hardiness and higher resistance to bacterial wilt than Ranger. We do not know of any northern or central states where Vernal has not shown distinct superiority. Other tests indicate that it has the capacity to stay green longer, when other varieties yellow due to drought, insects or disease. It is a rugged variety. Vernal is fine stemmed and yet a heavy yielder. Forage is dark green in color. It combines so many fine characteristics that you cannot go wrong in choosing it. It is estimated to be worth \$5.00 to \$10.00 per acre more than any other alfalfa.

The Ranger and our 4 and 5 Year Blends of Alfalfa still comprise the bulk of Alfalfa seedings in the northern part of our country and the Buffalo from central Iowa south. All are splendid values.

### CERTIFIED VERNAL

Blue tag quality. This seed is sown, grown, harvested and cleaned under state supervision, just like Certified Ranger and Buffalo described below. When you buy from Berry's, you get this seed protected by our famous Gro-Coat formula that makes it worth \$3.00 to \$5.00 more but it actually costs but a few cents more. It pays to demand it. See Item No. 29.

### SPECIAL VERNAL

In preparing Blue Tag Certified seed much good service able seed is removed in processing. It is smaller berried seed and some of it may be a little off color. It is much the same as our Honest John quality. Our "Special" Vernal is made up of such seed together with some Non-Certified stock. It is priced low and is a tremendous value. Item 29a on price list.

BE SURE TO INOCULATE ALFALFA SEED. SEE PAGE 15.

## OTHER WILT RESISTANT ALFALFAS

### World Brand Buffalo

Buffalo is a selection from Kansas Common Alfalfa that has marked resistance against bacterial wilt. It has the heavy yielding, fast growing, rapid recovery characteristics of the Kansas plus this wilt resistance.

When bacterial wilt invades your area, you are almost forced to a wilt resistant type. You cannot control it by spraying.

Buffalo is not as winter hardy as Vernal and Ranger and yet many Northern farmers like it especially in short rotations. It is rapid in growth, has quicker recovery, taller stems. It is a splendid all purpose variety for areas lying south of a line drawn through south central Iowa and all sections having similar conditions.

Our World Brand Buffalo is very fine quality seed. It is bright, plump, and clean. Will generally run about 99 1/2% pure and 90% or better germination with this coating on it but by rubbing a little between the palms of your hands it comes off readily and you can then see how beautiful it really is. This Alfalfa makes a splendid selection to use in ordinary corn hog rotation. Farmers who practice clean ground alfalfa pasture for hogs will like this. A good many are now using blends instead of straight varieties as described on pages 8-9.

We can give it to you either straight or blended and all at prices that will really save you money when figured on cost per acre. Gro-Coat is not an inoculant. See Be sure to inoculate your alfalfa seed. Gro-Coat is not an inoculant. See inside front cover. See item 22 on the price list.

### Really Sold on Gro-Coated Brand Seeds

Your Gro-Coated seed is all that you say it is. The high germination and sturdy plants that we get from your seed year after year has really sold me on Gro-Coated Brand seeds.

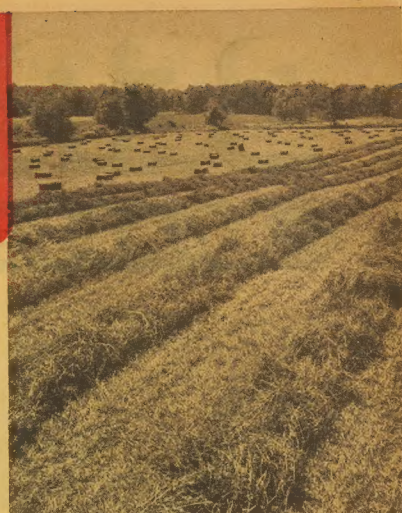

—WILBUR MELAAAS, Rt. 1, Bangor, Wisconsin

### Gets Wonderful Crops

Enclosed find check for 500 pounds of your Marvelous Mixture. I have sown this mixture on my meadows for a number of years and have had wonderful luck in getting good stands. It makes great hay for the cattle.

—D. C. SCHAFER, O'Neill, Nebraska

### WORLD BRAND VERNAL

Large quantities of Vernal Alfalfa seed are not grown under certification. Seed equal to Blue Tag in quality, in color, purity, germination can be bought at sharp discount in price. Our sales on World Brand Vernal are heavy and all buyers are happy with the big savings. See Item 23 on price list.

### World Brand Ranger

This is an extremely popular variety of Alfalfa. It has excellent winter hardy qualities. It has high resistance against bacterial wilt. This is a disease that is creeping into Alfalfa stands in many areas if stand is left for more than two years. It causes leaves to drop off and many plants die.

Ranger is a heavy yielder of fine stemmed leafy hay. That means high feeding value. The plant growth generally is not as tall as Buffalo but it is more winter hardy. We definitely recommend it for Northern areas. Additional information on Ranger is in the lower left hand column.

Ranger is, in fact, the product of several of the older varieties like Cossack, Ladak, etc. As with Buffalo there are thousands of acres now seeded to Ranger that are not grown under certification, yet produce beautiful, bright, clean and equal to the best in quality and, of course, it's Gro-Coated Brand seed and guaranteed. See Item 27 on price list.

### SPECIAL RANGER LOT 28

See Front cover of this catalog for description of this lot which is one of the year's best values. In Gro-Coated Brand we guarantee this value can't be equaled or excelled anywhere.

## CERTIFIED RANGER

We have certified Ranger in the Blue Tag quality. While Ranger is a very hardy Alfalfa, your state agricultural authorities will tell you that it is not necessary to have the seed grown in the north to maintain this hardiness. They stress that it is important that the seed come from fields that are growing from approved foundation seed stock for a period of not to exceed six years. If that is done, California grown seed is equally as hardy as northern grown. That is why many advocate Certified seed when southern seed is used.

We generally have both Northern and Southern Certified seed while our non-certified seed, as described above, comes chiefly from central or northern or northwestern areas.

See price list for listing of the kinds available at the time catalog is mailed out. You will find either northern or southern certified equally satisfactory and equally hardy. It is all Blue Tag quality. As explained under Buffalo in opposite column, you do not have to sow Gro-Coated Brand Ranger at as heavy a rate as the same Certified seed without this protection. That's because we keep seeds from rotting and there are more seeds that make growing plants. See catalog envelope and inside front cover. For Certified Ranger Alfalfa, see item number 25 on the price list.

## CERTIFIED BUFFALO

Certified seed is produced under a state inspection system. This gives assurance of varietal purity and it also indicates high quality. As the variety becomes more widely grown, many, many acres are sown to Buffalo but are not grown under certification. Originally certified seed was the only kind available. Now there is much high quality Buffalo that is not Certified.

We do have, however, the Certified Buffalo Alfalfa seed for you and price it most reasonably considering the true basic quality of our seed. It has the Gro-Coat protection and our tests indicate that you can sow this at 1/4 less seed per acre than Certified Seed without Gro-Coat protection. There is a real economy in using such seed, and remember this: if you do want to sow our seed at regular rates and if that makes our seed cost you more money per acre, we'll give you that extra money back if our seed doesn't give you better stands.

Our Certified Buffalo is Blue Tag Quality, and as fine a quality as money will buy. You'll like Buffalo Alfalfa as a money maker on your farm if you live in the area or want it for the purposes set forth in the above description of World Brand Buffalo. See item 21 on price list.

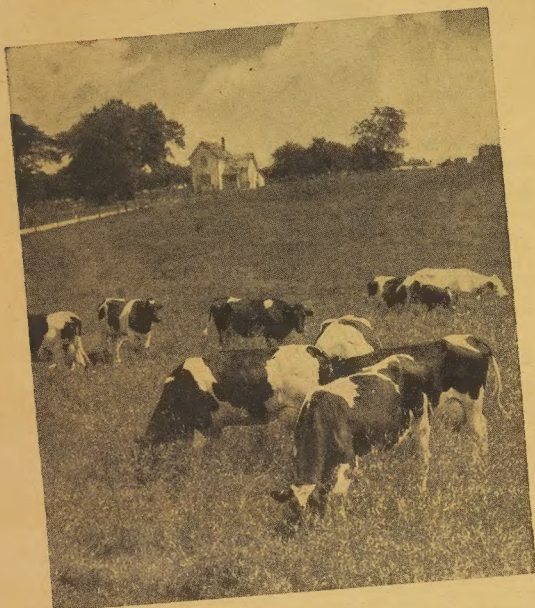

# BERRY'S NEW

## ADAPTED TO DIFFERENT AREAS

BE SURE TO INOCULATE ALFALFA SEED — See Page 15

### A New Concept of Alfalfa Seedings

Today we have new varieties of Alfalfa. We also have a new concept of using alfalfa fields for different purposes. The dairy man and the beef producer want something different than the farmer who is mainly a producer of pork. Then again some desire a high quality but low cost alfalfa seeding they plan to use mainly for soil building purposes. It is to fill these distinctly different needs that Berry has developed 6 new blends. They are designed to give you the maximum in quality, production and all around outstanding performance.

### DAKOTA ALFALFA

#### FINEST NORTHERN GROWN SEED

This seed is South Dakota dry land seed. Some seedsmen still sell this as "Dakota 12", but that is not recognized as a variety by U.S.D.A. This, however, is the same seed as that previously sold as "Dakota 12". We have many customers who consider our Dakota seed as the very best to be had anywhere at any price.

The characteristics they report as liking are winter hardiness, excellent growth habits, fine quality hay, heavy yields and long life. Many customers have a preference for seed grown on dry land instead of on irrigated land. This does not seem to have any noticeable effect but there is still a strong liking for dry land production. You get that in this South Dakota grown seed.

You can well understand that plants which survive South Dakota conditions of severe cold, sometimes extreme heat and in most years a protracted period of drought, have to be strong, vigorous plants. Naturally, these characteristics are passed on in the seed and you get that when you sow such seed.

Since this seed is sown under dry land conditions the crop varies greatly from year to year. This year supplies are a little better than usual, so you can buy it to much better advantage. If you want to get started with Dakota alfalfa again this is the year in which to do it. You will be delighted with the fine quality of our seed. It's World Brand and that means something Extra Fancy in color, purity, germination, and all other factors that make top quality. Will gladly send you samples. This seed will please the most critical buyer.

Yes, it has Gro-Coat protection. That is essential on any seed if you want the greatest possible assurance of getting better stands, healthier plants, and bigger yields. You can sow at lighter seeding rates. It is very economical. See Item 18 on price list. Small lots, postpaid, any Alfalfa on this page: 2 lbs., \$1.50; 5 lbs., \$2.95; 10 lbs., \$5.50.

NOTE: If you prefer other Northern origins like Nebraska, Washington, or Idaho, write us stating your preference and we will supply same if possible, and in the same quality and probably the same price.

### Other Alfalfas Available

If you should want Grimm or Cossack or other Common origins not listed in this catalog, be sure to write us giving approximately the quantity that you will need. We can offer you any Alfalfa available including Nomad, Rhizoma, Atlantic, Williamsburg, Narragansett, etc., and furnish it to you on the wholesale basis. So be sure to write us if you want any alfalfa or other seed not listed in this book. We can get it for you and it will be Gro-Coated, too.

### 5 YEAR Blend No. N.B.D.

Formerly Northern Beef and Dairy

We call this 5 year Blend because it is recommended to those who like to maintain a stand of Alfalfa for several years. Both varieties in this Blend are of extra hardy lines. It contains approximately  $\frac{1}{2}$  of the hardy, heavily productive, wilt resistant Vernal, and  $\frac{1}{2}$  Ranger. They are both noted for extra winter hardiness, fine hay quality and excellent yielding ability. There is some difference in plant height which means more lower as well as more top leaf growth.

The seed is the very top in quality. It will run 99 $\frac{1}{4}$ % to 99 $\frac{1}{2}$ %, pure with 90% to 94% germination. It is not guaranteed outright to last 5 years or longer because on certain soil types and with a combination of unfavorable climatic conditions it is possible to have a reduction in stands. However, we know of no other combination that will last as long as this 5 year blend. It is our belief that a blend seeding is in several ways superior to straight seeding. See Item No. 5 on price list.

### 4 YEAR Blend No. C.B.D.

Formerly Central Beef and Dairy

This is similar to our 5 year Blend excepting that it contains somewhat less Vernal and has the heavy producing and wilt resistant Buffalo added. This is approximately 60% Ranger, 25% Buffalo, and 15% Vernal. This 4 year blend has even greater producing ability than 5 year because the Buffalo is a very heavy yielding variety. We call this 4 year because the Buffalo is not as winter hardy as Ranger and Vernal, yet it is well adapted to all areas having climate conditions similar to those going up into Central Iowa. As a matter of fact it is the choice of many farmers in northern states because of its productive potential. As explained under 5 year, we do not guarantee a stand for 4 years but the term indicates its longevity in comparison with our other blends.

As a rule dairy farmers like the longer rotations best and 5 year and 4 year Blends are designed to give you the results you want to attain. We believe you will like them as we have many favorable comments from farmers who have grown them. See Item No. 6 on price list.

### TWO LOWER PRICED BLENDS

### LOT BED ROCK All Hardy Blend

This is a lower priced version of our 4 and 5 year Blends. It contains some of the new wilt resistant alfalfas like Vernal and Ranger and others of hardy characteristics designed to give the stand a longer life and extra winter hardiness.

Like Honest John it does not have the color and appearance of top quality seed but gives splendid performance. Read the description of Honest John to give you a better understanding of this very serviceable quality.

This is your choice if you want to get a blend of hardy, wilt resistant alfalfas of lower grade to trim your seeding costs to Bed Rock. Item No. 17.

Yes, it's Gro-Coated Brand, too, and guaranteed like all Berry's seed.

#### 50 BUSHEL MORE THAN BEFORE

I planted Berry's Gro-Coated corn this past year. My corn yield is at least 50 bushel more than in any other of the 13 years I have farmed this land. It made a very outstanding performance as this land is considered to be the highest and thinnest land in Franklin County.

—DALE R. JONES,  
Hampton, Iowa

#### HAD THREE CROPS IN DRY YEARS

I am cutting a third crop of Alfalfa this week despite drought and grasshoppers. This Gro-Coated seed I purchased from you has provided a good initial stand and it has been maintained. I am for Gro-Coated seed.

—GUY R. GRAHAM,  
Chilhowee, Missouri

# ALFALFA BLENDS

## FOR MAXIMUM LEAF GROWTH

BE SURE TO INOCULATE ALFALFA SEED — See Page 15

### 3 YEAR Blend No. H.G.

Formerly Hog Grower Blend

Most farmers whose program includes hog production seem to like a shorter rotation. This 3 year Blend is designed to give a seeding that fits into such a plan. Its use is, of course, ideal for anyone who likes a 3 year rotation.

It is not so necessary to consider bacterial wilt because that disease is largely troublesome in older stands. Thus we can use the heavier producing lines like old reliable Midwestern or Northwestern Alfalfa such as was formerly sold as Dakota No. 12. There is approximately 40% of that in the 3 year Blend. There is 40% Ranger and 20% Buffalo. It is all top quality seed and all has Gro-Coat protection.

This Blend can be used in a 2 year rotation like Red Clover. What we term a 2 year Blend is for quick rotation and that one is made up of what we generally call non-hardy type. That Alfalfa generally lives over one winter. However, our 3 year Blend, as explained above, is hardier types and it is recommended for either 3 or 2 year rotations. All top quality seed. See Item No. 2 on price list.

### Why We Recommend Blends

They generally produce larger yields and customers report a higher percent of leaves than most varieties that are not blended. You may read or hear that not everybody considers blends superior. In all probability they have not compared with Berry's Blends. We ask you to try them. The way you can really find out is to test them side by side. Many of our customers have done this. The steady increase in the demand for our Alfalfa Blends is eloquent testimony to superior performance.

The 5 year — 4 year — 3 year and 2 year Blends listed on these pages are all top quality grades. They will run 99 1/4% to 99 1/2% pure and 90% or better germination. It is as fine a quality of seed as money can buy and all of it has Gro-Coat protection. Each seed is protected from organisms that cause seed decay, seedling rot and disease. Our New Gro-Coat formula with CM957 added is a product of our research department and is in our opinion the finest seed protectant yet developed. You have greater assurance of better stands. More of the seeds you sow will make strong, healthy plants. You can sow 20% less seed per acre and get excellent results.

The terms 5 Year Blend — 4 year — 3 year and 2 year are used to indicate their relative longevity. It does not mean that they are guaranteed to live those designated years. They may live considerably longer. The 3 year, for example, may well last 5 or 6 years. Then again under a combination of unfavorable conditions could cause even the very hardiest to suffer damage. For practical purposes, however, these designations will serve as an excellent guide to their normal performance as per their descriptions.

See pages 2 to 4 for Valuable Information

## SAVE YOU STILL MORE

### LOT HONEST JOHN A Blend of Old and New Varieties

A LOWER COST SEEDING — YET A GOOD ONE

Many Berry customers have sown Honest John for many, many years and will use nothing else. Many claim it gives better stands than higher priced seed. It is not as high in color and the berries are smaller in size than the more expensive grades. The smaller seeds mean there are more seeds per pound or per quart.

Lot Honest John contains some of the new varieties like Ranger and most of that seed is grown for seed production in the west. It also has the reliable Midwestern and Northwestern seed of the type that was formerly sold as Dakota 12. Lot Honest John is very similar to our 3 year Blend but in a little lower quality bracket. It is a splendid value at our low price. Gro-Coated Brand processed and guaranteed satisfactory. See Item No. 11. Postpaid: 2 lbs., \$1.25; 5 lbs., \$2.30; 10 lbs., \$4.15.

#### LIKES ALL OUR SEED

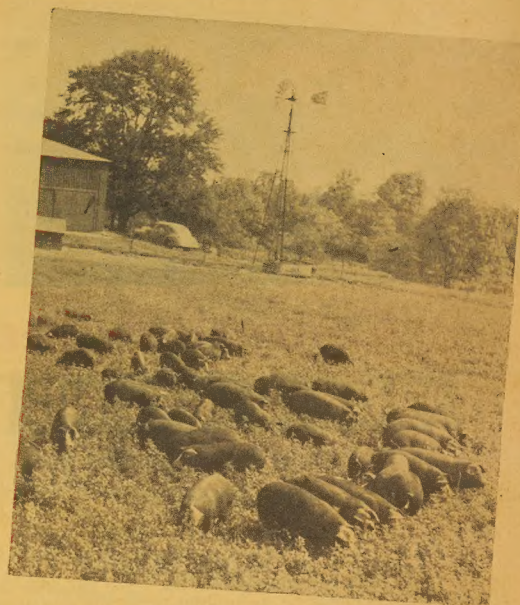

My Berry's Nemaha Oats are a good uniform stand, from heavy clean seed. My son-in-law's Golden Beauty Oats are planted just across the road and are a good stand. I like Berry's Gro-Coated seed corn because it was well graded and produced a good stand.

—JOHN H. GEIKEN,  
Wellsburg, Iowa

#### Could Have Sown Twice As Much Acreage

Please let me take this opportunity to say that I am sold on Gro-Coated clover seeds or any seed for that matter. I think every seed I have sown is accounted for. I could have sown twice the acreage from the Alfalfa and Hubam Clover seed I purchased from you.

—GARY MAYNARD,  
O. K. Rubber Welders,  
Morristown, Indiana

See Page 15 for Inoculation

### 2 YEAR Blend No. Q.G.

For Plowing Under and Maximum Early Production  
Top Quality 99 1/4% Pure and 90% Germination

There is a big demand for alfalfa that will make a big growth the same year it is sown. This can then be used for hay or pasture and be plowed under for soil building purposes. Also see Lot Champion and Lot Soil Builder, page 11. We have found that seed from areas of the south and west are the most productive in this manner. For maximum results, sow without a nurse crop. The southern and western alfalfas have been produced under higher temperature conditions and are therefore adapted to this type of seeding. Light nurse crops may be used if so desired.

Alfalfas used in our quick grow blend are from states like Texas, New Mexico, Arizona and California. Of non-hardy origin, they oftentimes do winter over. You can buy this blend at a very low cost. When you consider it is Gro-Coated and can be sown at 1/4 less seeding rate than normal, it makes the value the more attractive. We can certainly recommend this to you. A splendid alfalfa to sow if you want results in a short time. For best results seed at heavier rate than other alfalfas. With regular seed 20-25 lbs. per acre. Berry's Gro-Coated Brand, 15-20 lbs. Postpaid prices: 2 lbs., \$1.40; 5 lbs., \$2.45; 10 lbs., \$4.45.

## OKLAHOMA ALFALFA

Beautiful World Brand Quality

Many farmers want this type of alfalfa because of its fast growth and big yields. It is not as winter hardy as some of our other alfalfas but it generally lives over one winter in most sections. We consider that this would be sufficiently hardy for the southern half of the corn belt up to central Illinois, Indiana, and into northern Missouri. The production farmers get from this Oklahoma seed is often amazing. Dairy farmers like it. It makes excellent hog pasture, too. Growth the first year often excels other kinds. Also is a fine plow-under for green manure. It is grown on dry land and not irrigated. Dry land production is preferred by quite a lot of farmers. Therefore you get many desirable characteristics in our Oklahoma alfalfa plus top quality grade, bright color, high purity, strong germination. It is strictly World Brand Extra Fancy seed and it is priced to save you money. See Item 7 on price list. In small lots same as 2 Year Blend priced above.

# Medium Red Clover

## Certified DOLLARD Clover

This is an exceptionally fine new medium Red Clover that is especially adapted to northern areas. It is more winter hardy than other Red Clover. That alone is a very superior characteristic. It is better in other ways. It yields more. Under conditions favorable to Red Clover it will outyield the ordinary Red by 6% to 7% but when conditions are unfavorable because of Northern Anthracnose disease it outyields other Red 20% to 30%. This Northern Anthracnose is becoming very common. It may not take entire fields but it can take big patches in a field and reduce yields there to practically nothing. Another important feature under many circumstances is that it lives over better into the third year. Dollard is by far the best clover to use in a pasture program.

While Dollard is especially good for northern states like Minn., Wis., Mich., New York, etc., it has also made a fine showing in states like Iowa, Illinois, Indiana, Ohio, Penn., etc. Northern Anthracnose may be found in all of these states and wherever that disease is found Dollard is the clover to sow. In the southern part of the Red Clover section the southern type can be very damaging. For such areas the Kenland Clover, described below, will give excellent performance.

This is the second season supplies of Dollard are available in considerable quantity but considering demand the supply is limited. So be sure to order early if you want some of it. See Item 39 on price list. Small lots, postpaid: 2 lbs., \$1.80; 5 lbs., \$3.70; 10 lbs., \$6.85.

We will gladly quote any buyer special delivered quantity prices.

## Central States Medium Red Clover

### WORLD BRAND

#### Finest Central States Medium Red

This is the extra fancy quality of the Medium Red Clover, produced in the corn-belt state. It is beautiful seed and will run 99% or better pure and 90% or better live seed.

This seed will come to you with the Gro-Coat protection which is, of course, thoroughly Guaranteed as explained on page 2. This coating gives the seed a dull looking color, but if you rub some of it in your hands, you can bring out the beautiful bright color underneath and you will see the big bold berries that carry an abundance of life and vigor in them.

The Central States Medium Red is thoroughly adapted in the Corn-Belt and we are proud we can offer you a value such as this. Price postpaid on Items 32-36: 2 lbs., \$1.65; 5 lbs., \$3.35; 10 lbs., \$6.15. See Item No. 34 on price list. Inoculate Red Clover Seed. See page 15.

### BERRY'S FANCY

#### A Very Good Grade at Much Lower Cost

In purchasing our Medium Red Clover in the country naturally you find some lots of seed that are not as nice appearing as others. Only the very finest goes into our World Brand quality. If you demand the very finest seed that can be bought, order the World Brand grade. However, you can get very serviceable values in this fancy grade.

Nice in color and there will be a trace of crop seed. Probably around 1%. By crop seed we mean seed like Alfalfa, Alsike and Sweet Clover. But with a percentage as small as this, you would not have any important change in the crop that you would produce. For all practical purposes Berry's Fancy Quality will give results equal to the best. For color, size of berry and all around appearance it is equal to what is often sold as the best. It is a thoroughly dependable seeding of hardy home grown origin and adapted throughout all northern and central states. Yet it has Gro-Coat protection and is priced to save you real money, quality considered. See Item 33 on price list for quotations.

See our special Star Red Clover Lot Super-Value described on front cover of this catalog. It is a value in Gro-Coated Brand seed we guarantee can't be equaled anywhere. Item 32.

SEE PAGE 15 FOR INOCULATION

## IDAHO GROWN MEDIUM RED WORLD BRAND

### IDAHO GROWN MEDIUM RED CLOVER WORLD BRAND

This is the seed that commands a premium on the market. It is unusually beautiful, having a very high color. It is bright clear and clean. Plump seeds that are full of vitality and have strong germination. We have thousands of customers who greatly prefer Idaho over any other.

This World Brand gives you extra fancy quality. It is as nice as money can buy. Will average 99.25% purity, 92% or better live seed. You cannot buy a better quality. Remember, too, our guarantee that it will produce better stands under the same conditions. You can't go wrong when you buy Berry's Gro-Coated Brand Seed at these special direct to "Buyer" prices. You buy for results and we will give you the greatest assurance of bigger yields at lower costs that will make you more profit.

Most farmers sow six to six and one-half pounds of seed per acre. Some like to sow up to eight pounds and get greater production. Either way, we guarantee you satisfaction. Always write for samples on special quality lots and prices on larger quantities or on group orders with your neighbors. Small lots, postpaid: 2 lbs., \$1.65; 5 lbs., \$3.35; 10 lbs., \$6.15.

## KENLAND CLOVER

We are very much enthused by the wonderful reports that have come to us from farmers in southern Iowa and throughout Missouri and sections having similar conditions. This variety is resistant to the Southern Anthracnose like Dollard (described above) is resistant to the northern strain. This disease is becoming more and more common. Whenever it comes in, yields from Kenland may increase 25% or more over Common Medium Red. The superiority of Kenland under disease conditions is so noticeable that farmers are quick to spot fields of Kenland. Whole neighborhoods flock in for this seed when they see its performance. Anthracnose will not take all of your fields but it can certainly reduce yields. You have an extra measure of assurance of getting and keeping good Red Clover stands by sowing Kenland. Costs but little more per acre and it is certainly worth it. Certified Seed Item 37 on price list. Non-Certified No. 38. Small Lots, Postpaid: 2 lbs., \$1.70; 5 lbs., \$3.45; 10 lbs., \$6.35.

#### Perfect Stands — Abundant Yield

As one of your very pleased customers, I have been sowing your Gro-Coated seed for the past four or five years, and I wish to state that it has produced abundantly, also I have always received a perfect stand. It is with great pleasure that I recommend Gro-Coated Seed.  
—HENRY ALBRIGHT,  
East Leavenworth, Mo.

#### Used Gro-Coated Seed With Great Success

I have used several qualities of your Gro-Coated Brand Seed and sincerely consider this to be a great improvement in seed preparation. It is my opinion that it makes thicker stands of sturdy plants and bigger yields.  
—C. W. JOHNSON,  
Eldorado, Illinois

#### No Better Seed To Be Found

I would say that I have used your Gro-Coated seeds and found there is no doubt about it there is none better to be found. When I am in need of seeds, I will use them as I have always had the best stands of grass seed from them.  
—ISSAC E. SHAVER,  
Box 503, Sutton, W. Va.

#### Wants Only Berry's Gro-Coat Seed

Berry Seeds are tops for me. Always perfect stands from Gro-Coat. I always get the kind and quality the catalog says. I would not think of buying seed any place else.  
—PAUL R. MILLER,  
Winterset, Iowa

# ECONOMICAL RED CLOVER "CROP" LOTS

By "Crop lots" we mean clover that may contain some other agricultural seed. For example, it may be alfalfa in Red Clover or sometimes, alsike or a little sweet. There might be 94% red and 5% alfalfa. That means a total of 99% fine quality crop. But, since it is only 94% clover, we can secure such seed at a sharp discount in price. Thus you can make big savings on seed that has splendid value.

The percentage of crop seed will vary and often we may add additional crop seed in order to make uniform lots such as those described below. You always get the advantage of the original price discount. This is why we have such a big demand for these special values. They spell real economy because they give you splendid quality at most reasonable cost. All lots have Gro-Coat protection so you have the extra assurance of getting better stands from every pound you sow.

## Lot BEAUTY

**Red Clover with 25% Alfalfa**

This is medium Red Clover. We combined the different lots of Red Clover that we got which contained some Alfalfa seed, and uniformed it so as to make a lot that will average 25% of Alfalfa seed. It is beautiful quality seed, all thoroughly re-cleaned, high in purity and strong in germination. Contains all hardy Central and Northern origin Alfalfa and Red Clover. We consider it adapted to the entire Corn Belt.

There are many farmers who make a practice of sowing mixed seedings. By purchasing these lots you get a splendid mixture at a big saving in cost. Sow 7 lbs. per acre. It is surprising the yields that have been obtained from this kind of a seeding. We believe that there are many of you that will like it. Our extensive purchasing organization tries to give you greater values, and this beautiful seed, free of noxious weeds, 99% crop purity is a wonderful offer. Buy early. See item number 31 on our price list.

**Noted Doctor Endorses Gro-Coat**

Replying to your inquiry in reference to my observation on Gro-Coated Brand seeds, beg to advise: Gro-Coated seeds give me better stands with no wilt or stunted plants noted. The growth is faster and stronger. The strong root system gives greater drought resistance. In short, the plants become established in less time than non Gro-Coated seed.

I have purchased grass and legume seed from your Company for over forty years. —GEO. H. NIEMAN, M.D.  
417 So. 8th St., Ponca City, Okla.

## Lot CHAMPION

**50% Alfalfa — 50% Red Clover**

This is a very special combination. It is designed to give quick growth for hay and soil building purposes. It is made up of 50% Southwestern grown Alfalfa and 50% Mammoth Red Clover.

This is a fine quality of seed with high crop purity, good germination and freedom from weeds. This seeding can make tremendous yields. While the Alfalfa is not the hardy type, it is the kind that makes faster growth and in combination with Clover will often winter over in the Corn Belt.

It generally lives over one winter, and can be used the next year for hay or plowing under. With 50% Red Clover when you sow this at 10 lbs. per acre, you will have approximately 35 Red Clover seeds per square foot and 30 Alfalfa seeds. You see therefore, that even if the Alfalfa should kill, you can have plenty of Clover to make a full stand. When they both winter over the yields can be enormous.

This is a wonderful value. See Item C on price list.

Postpaid: 2 lbs., \$1.45; 5 lbs., \$2.85; 10 lbs., \$5.25

## BETTER STANDS GUARANTEED

Page 2 of this book gives our guarantee that applies to all seeds with Gro-Coat protection. If our seed does not produce better stands than you can get from any similar seed sown and grown under the same conditions, we will refund any extra cost you may have in sowing Gro-Coated brand seed. This includes comparison with seed treated with any kind of material. For ten years Gro-Coat treatment has proven that it does help in getting heavier, healthier plants and bigger yields. The more unfavorable the weather after seeding, the greater the difference.

We strongly advise inoculation. Gro-Coat does not take the place of inoculation. To get maximum results, use Berry's New Nodule Germ inoculation. It is good for all kinds of legumes either treated or not treated and is especially good on Gro-Coated Brand Seed. Even though you grow Red Clover regularly, we still recommend inoculating your seed every time you make a new seeding. See page 15 for more information on inoculation.

## Lot LEADER

**Medium Red Clover with 25% Timothy**

This may be considered an old fashioned seeding, but still a very good one. There is enough Timothy in it to help establish a better sod than you get from straight clovers. It helps to hold your soil better. The Timothy has a higher leeding value growing this way than alone because the Red Clover feeds it with Nitrogen and steps up the protein content. The seed is beautiful plump seed with plenty of purple berries. This quality seed generally commands premium prices, but with the Timothy in it, is being sold at a very attractive figure. The percentage of Clover is so heavy that for practical purposes it's equivalent to straight clover. In fact, if you want to pasture it, there is Timothy in it to help reduce the danger of bloat. You can buy this mixed and get a nice uniform lot. All the seed has the Gro-Coat protection and is guaranteed. See item 30 on the price list. It is a splendid value.

Postpaid: 2 lbs., \$1.45; 5 lbs., \$2.85; 10 lbs., \$5.25.

# MAMMOTH RED CLOVER

## World Brand MAMMOTH RED

This is sometimes referred to as one cut clover. It is also called Sapling Clover. Grows taller and somewhat coarser than Medium. Blooms later, makes a heavier growth in one crop. Does not make a second hay crop although the after growth is excellent for pasture. Many like it better in pasture because it is generally longer lived. Also wonderful for soil building purposes. The use of Mammoth seems to be on the increase in recent years.

You may find that the Mammoth Clover fits into the Soil Bank Program in your area better than any other kind of Clover because it generally lasts longer. Use it straight in this extra fine World Brand quality or one of the other two lots described in the right hand side.

Place your order early. The World Brand quality is the very finest hardy northern grown seed, high purity and strong germination. Due to shortage of Domestic seed, we are handling some Canadian which is slightly lower in cost. Item 41a.

## Lot Soil Builder

**65% Mammoth Red — 35% Sweet Clover**

This seed is just what its name implies, a wonderful seeding to build up soil fertility. The sweet clover grows quite tall in the second year. The big growing Mammoth Red fills all the lower growth with a heavy mass of vegetation.

This can produce an enormous tonnage. You can make a hay crop of this. The hay will not be of as fine quality as Medium Red, but you can have a lot of it. Some farmers prefer big yields even though it is not as fine. In a pasture combination with grasses like Brome, Tall (Alta or Ky. 31) Fescue, and Timothy or Orchard grass it does a splendid job. Carries a lot of stock per acre.

When you plow under a crop like this, you do wonders for your land. Adds tons of humus and lots of nitrogen. Improves soil texture. We secured some mixed seed of good quality that makes this great value possible. It's Gro-Coated brand. See item 43 on the price list.

## Lot BIG-BOY

**High Crop Purity**

Here is another example of superior value. It brings farmers from all over the nation to Berry's for their seed supply. This lot contains about 4% crop seed. Aside from that it is equal to our World Brand quality. The berries are just as bright and clean and high germinating. The small percent of crop seed makes possible a very sharp reduction in price. While it is 99% pure clover seed there is 95% Mammoth. We watch for these kind of lots and buy them for our customers because we know they like them and it saves them money. This crop seed may be Alfalfa or Sweet Clover, but won't average over 4%.

Wonderful for soil building, also makes a splendid cutting of hay and a good after growth for pasture or plowing under. The percentage of crop seed is so small it can have but little bearing on results in your fields. You get your money's worth and then some in this splendid value. We may not be able to replace this lot later. Order early. See item number 42 on the price list.

# ALSIKE CLOVER

## VERY ECONOMICAL TO SOW THIS YEAR

A bushel of Alsike will sow 12 to 15 acres. There are twice as many seeds per pound as Red Clover. Alsike will grow on land too wet to grow Red. It also stands more acid in soil. It is a fine smooth stemmed clover. Makes excellent hay and pasture. A wonderful clover to use with Red Clover or in Clover and grass mixtures. A pound of Alsike per acre gives added assurance of getting better stands and it increases yields. Timothy, Fescue and Orchard Grass are good companion crops. Alsike is longer lived than Red. If you have loam to heavy soil Alsike is a splendid Clover. Not so good for sandy soils unless on wet land.

We have some wonderful values for you in Alsike Clover. It all has Gro-Coat protection. Takes the same inoculation as Red Clover. We advise inoculation. See page 15.

### UNIVERSAL BRAND ALSIKE

This is fine quality new crop seed, equal to World Brand in germination. It contains about 3% crop nearly all Timothy, so will give a very satisfactory performance. Sow around 4 pounds per acre. See Item 52 on price list. Note the very low acre cost.

### WORLD BRAND ALSIKE

This is our top quality. A grade that will please the most critical buyer. Beautiful dark green color. Big, strong seeds, packed with vitality. High purity and germination. Only our very finest quality makes this extra fancy grade. Guaranteed to please. A great value. See Item No. 54 on price list. In small lots, postpaid: 2 lbs., \$1.30; 5 lbs., \$2.50; 10 lbs., \$4.50.

## LADINO CLOVER

This is a giant form of the common white pasture clover. It is a perennial that is easy to get started. It is good for loam or clay land and will stand wetter land than Alfalfa or Red Clover. Plants grow erect, 10 to 15 inches long. It also has fleshy creeping stems that root at the joints. One plant may occupy 2 or 3 square feet of space. It is wonderful to mix with grasses like Timothy, Blue Grass, Orchard Grass, Tall (Alta or Ky. 31) Fescue, and Brome. Sometimes it is used with Red Clover and Alfalfa. It can also be used to put in silo and to cut as a hay crop. Tremendous yields are reported. It is the finest poultry pasture you can get. Pennsylvania reports an 8-acre range carrying 2,500 to 3,000 head of poultry from April to late in October. Ohio — 2 cows and 3 calves per acre throughout the entire season without any other feed. Illinois — 3 cows per acre during the growing season. We recommend when used for cattle pasture that you have plenty of grass with it to reduce the danger of bloat. In Iowa, Michigan, Kentucky, or anywhere that Red Clover will grow, you can grow this crop. A little seed goes a long way. Two pounds per acre is plenty, less than that in combination with other crops. We handle only the Blue Tag Certified Seed. See Item 63 on prices list. Prices in small quantities postpaid: 1 lb., \$1.50. 3 lbs. \$3.45; 5 lbs., \$5.35; 10 lbs., \$10.25. Be sure to write for our circular, giving detailed information.

Be Sure

Inoculate  
All  
Clover  
Seeds  
and  
Trefoil  
See  
Page  
15

## BIRDSFOOT TREFOIL

### CERTIFIED EMPIRE STRAIN

There are two types of Trefoil that are most commonly used, the Empire Strain and the Imported. The Imported seems to be easier to start and grows taller, but does not maintain itself as well as the Empire Strain. Most people who grow the Trefoil want it for pasture purposes. The Empire grows closer to the ground, will stand more trampling, will reseed itself into thicker, quicker, stands more readily and we strongly recommend it over imported.

This is a long lived legume that has never been known to cause bloat when pastured. It is adapted to a very large range of soils, is drought resistant, and will grow on poorly drained soil as well as shallow droughty soil. Naturally, its heaviest production will come on good soils that have lime, but it will grow on very acid soils without liming. It is fine stemmed and very leafy. The leaves are in clusters of five.

It is a little slow in establishing itself, but once established will hold its own with other legumes. We have a circular giving more detailed information regarding this very valuable crop. It is hard to beat for pasture because it survives severe grazing abuses and it is also quite winter hardy. When you sow it, be sure to use triple the amount of inoculation that you normally would use for other clovers because very few soils have the necessary bacteria in them. See Item 66 on price list. Also Item 67 for Non-Certified Empire. You can buy this in small lots, postpaid: 1 lb., \$1.85; 3 lbs., \$4.35; 5 lbs., \$6.75; 10 lbs., \$13.25.

# LESPEDeza

### REGULAR KOREAN

This Lespedeza is a little later than the Iowa 6 or the 19604 but it normally matures seed up to the northern Missouri line. While not a tall growing plant, it is very leafy, furnishes a lot of pasture and makes its best growth during hot weather when other crops become somewhat dormant. We have this available in the unhulled Item No. 70 on the price list, and in the hulled and scarified Item No. 72. The hulled and scarified only takes about ¾ as much seed per acre as the unhulled, around 14 to 15 pounds per acre.

### IOWA 6 LESPEDEZA

This is a newer strain of early maturing Lespedeza that can be grown as far north as central Iowa and areas having similar growing seasons. Growth habits are similar to those of 19604. It has considerably more resistance to bacterial wilt. All Lespedezas can be grown on thin, poor soils but their use is, of course, by no means restricted to that kind of land. While not a tall growing plant, dense stands are obtained and the heavy percentage of leaves and fine stems make it a very nourishing crop. It is a great clover to put fat on animals. It stands a lot of drought. Makes a splendid pasture either by itself or in combination with other legumes and grasses. Be sure to inoculate your seed and use only the Gro-Coated Brand. See Item No. 74 on price list. Small quantities, postpaid: 2 lbs., \$1.00; 5 lbs., \$1.50; 10 lbs., \$2.75. Scarified seed only. Ask for our free Korean circular.

### SERICEA LESPEDEZA

This is a perennial variety. It comes each year from the roots. The growth is somewhat coarser than that of the other Lespedezas, although the plants are quite leafy. It has stood fairly low winter temperatures; it can be recommended for areas similar to the regular Korean. It is a big producer. Our Lespedeza circular will tell you more about it. See Item No. 76 on our price list.

### EARLY KOREAN STRAIN 19604

Like Iowa 6, it can be grown farther north than the regular Korean. It must be remembered that the Lespedezas are annual and will come up the following year only through seed shattered. So it is desirable to have a variety that matures seed earlier. This and Iowa 6 mature about 100 miles further north than ordinary Korean. Both grow fairly, tall, up to 2 feet high. Ask us for our circular on Lespedeza to give you information on this crop. Be sure to inoculate Lespedeza when you sow it. See Item No. 75 on the price list.

# Our Most Popular Mixed Seedings

## MARVELOUS MIXTURE

Contains about 25% each of Timothy, Alsike and Sweet Clover,  
15% Alfalfa, 9% Medium Red and Some Ladino

This is our heaviest producing combination and a very popular seeding. It is used for hay and for pasture. This high clover content is one our customers like. Not only does it produce lots of feed of high feeding value, but it helps in soil erosion and in building up soils. When you sow this mixture at 10 pounds per acre, you have an average of from 50 to 60 Clover seeds per square foot and the Timothy in addition.

The seeding will last several years. The Alfalfa seed in this mixture helps to establish this crop on your land. Sweet Clover opens up the soil and adds much nitrogen. Red Clover and Alsike fill the lower growth while the Timothy supports them, and adds to the weight and growth of all.

The percentage of Ladino is not large because it is frequently used as a pasture, and we limit the quantity of this to reduce bloat danger. It is amazing to see the dense growth as well as a tall growth that you can get from this Marvelous Mixture. It is a great seedling and our customers are enthusiastic about it. Year after year Marvelous Mixture continues to be our biggest selling item.

We have received many, many letters praising our Marvelous Mixture. They speak of the savings they have made in buying it; tremendous yields they have obtained, and how they have grown it year after year without any disappointment. All of these seeds in Gro-Coated Brand give you the greatest assurance of the maximum number of plants and it is truly amazing what this seeding has done for many of our customers.

You, too, can become enthused over its wonderful production, high feeding value. See how it checks soil erosion and enriches your land. It is all domestic seed and the price we have on it this year makes it an outstanding value. See Item No. 95 on our price list. Postpaid: 2 lbs., \$1.25; 5 lbs., \$2.35; 10 lbs., \$4.25.

### Well Pleased With Results

I have been using your Gro-Coated seeds for a number of years and I have always been well pleased with the results. I can recommend them to others.

—DALLAS HERMAN, Mt. Cory, Ohio

Study Page 6 to Help You  
Get Best Results

We Advise Inoculating All Mixtures That Contain Legume Seeds.

## Basic No. 1 Mix

A splendid all purpose pasture mixture. This is a proven time tested pasture seeding. It has produced excellent results. It provides plenty of pasture and while there are legumes in it, there is ample grass to drastically reduce the danger of bloat. It gives you a variety of feed, and that is what livestock likes.

You get a long period of growth which helps you on your feeding problem. There are more pasture days, and therefore more pounds of gain per acre. That is what makes profits.

In preparing Basic No. 1 we have selected a splendid combination of grasses and legumes. Such a seeding should last for quite a few years. There is a little Rye grass in it to establish a sod and to provide some early top growth. Approximately 90% of the crops are more permanent so there is a maximum of production in the second year. All should remain for several years and produce an abundance of feed for cattle and hogs, and sheep.

This mixture contains approximately 20% Tall Fescue, 15% Timothy, 15% Orchard Grass, 20% Brome Grass, 25% Alfalfa and 5% Ladino. This makes 70% Grasses and 30% Legume. Splendid for pasture. This is in no sense a cheap mixture but a high quality combination. All the seed is carefully cleaned. It is carefully put together in our specially designed mixers and we try to get the mixture just as uniform as possible. It is, of course, all Gro-Coated Brand. We recommend sowing 16 to 20 pounds per acre. See Item No. 107 on our price list.

It is very easy to adapt this Basic No. 1 to different soil types by adding some other grasses. For example, on moist or poorly drained soil, you could add Reed Canary Grass, Meadow Foxtail or Alsike. If you have light thin land, you could add some Mammoth Clover, more Orchard Grass and Sweet Clover if the land is not sour. On sandy soils Crested Wheat Grass, Clover and Meadow Fescue may be added. The Basic No. 1 in itself is adapted in a very wide range of soils and are highly satisfactory for a seeding. It is guaranteed entirely satisfactory. Small lots, postpaid: 2 lbs., \$1.30; 5 lbs., \$2.45; 10 lbs., \$4.45.

## 5 Way Mix

65% LEGUMES, BALANCE TIMOTHY

Contains Red Clover, Alfalfa, Alsike and Ladino

Every year our famous 5-Way Mixture comes closer to Marvelous Mixture in popularity. The percentage of Clovers is not quite as heavy. It contains more Red Clover but no Sweet Clover. This makes a splendid mixture for semi-permanent meadows and pastures. It provides both quantity and quality of seed. Sow 8 to 10 pounds to the acre.

You will find you can make a substantial saving in buying any of these mixtures. We are able to obtain some lots of seed that are grown mixed and can buy them at a discount. By combining these kind of lots we can produce a real high quality seeding and at a genuine saving in price. It is cheaper than to buy all these seeds separately and then make a straight blend. We put these lots together adding Clovers or Alfalfas as may be required to make it as uniform as possible.

High Clover content means big yields in addition to fine feeding value and wonderful soil building properties. Berry's 5-Way Mixture is adapted to a wide range of soil and climates, and is Gro-Coated to give you splendid performance. Item No. 100 on our price list. Small lots, postpaid: 2 lbs., \$1.30; 5 lbs., \$2.50; 10 lbs., \$4.55.

### INOCULATION OF MIXTURES

We are often asked whether mixtures of grass and clovers should be inoculated. The answer is Yes. The grasses are not benefited by inoculation, but the Clovers are. We suggest that you use at least a bushel size package of inoculation on 100 pounds of mixed grass and clover seed. Use our regular Alfalfa and Clover combination, unless the mixture contains Trefoil and then add some special inoculant for that crop. See page 15 for information on inoculation.

### Extra Yield Brings Profits

Your Blue Seal Processed Gro-Coated Cherokee Oats gave me a splendid yield, good quality and heavy test weight. I am convinced that it pays to sow Blue Seal Processed Gro-Coated oats instead of my own oats. The extra yield more than pays for the seed.

—LEWIS J. JOINES, Humboldt, Iowa

### More Than Pleased

I have bought seeds from you for many years and I have always been very well pleased. Gro-Coated seed is everything you claim for it. I have never lost a stand since I used it.

—JOHN GAKEMEIER, Louisville, Nebr.

### Alfalfa Grows Faster

September 7, 1954  
I am sending you a picture of our Alfalfa field that was grown from your Gro-Coated Seed. This is the third cutting we have had this year and it has been a very dry season. The Gro-Coated seed grows faster and the crop seems more blight resistant. Our next order will be all Gro-Coated.

—HOWARD FISHER, Fort Loudon, Pa.

### A Firm Believer in Gro-Coat

August 28, 1954  
I am a firm believer in Gro-Coated seed. Gives better stands, faster growth, stronger roots and quicker recovery, also I think it has greater drought resistance. You will be satisfied when you sow that kind of seed.

—FRANK SULLIVAN, Salem, Indiana

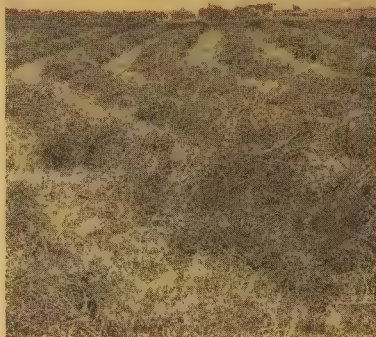

# SWEET CLOVERS

## World Brand Yellow Blossom

This is the finest quality of the yellow blooming biennial Sweet Clover. Blooms and bears the seed about 10 days to 2 weeks earlier than the White. Does not grow quite as tall. Is generally more leafy. You will find the two about equal from the standpoint of building up worn out soils. Both will grow on very poor ground if it is not too sour or acid.

This crop stores a tremendous quantity of nitrogen in the soil. The big roots grow down deep. They decay rapidly when plowed under. Sweet Clover will break up a light hard pan. Makes a good hay crop especially in the first year or if cut early in the second year. Is wonderful with carrying capacity in pasture, and stock will eat it readily after they become accustomed to it. Sow Sweet Clover 12 to 15 pounds to the acre.

We want to emphasize the beautiful quality of our World Brand grade. This seed will please you no matter how exacting or particular you may be about seed quality. Big berries, fine color, high purity, strong germination and it's Gro-Coated. See item number 88 on the price list.

### WHY WE ADVISE INOCULATION

When you inoculate your legume seeds before you sow them, you have positive assurance that the proper bacteria for that particular crop are present. That is absolutely necessary in order to get the maximum production of the crop which you sow.

## World Brand White Blossom

Tall or Largely White

This represents the very finest of qualities in Sweet Clover. Big berries, bright color, high purity and strong germination. We find it necessary to specify in connection with offerings of White Sweet Clover, to state that it all may contain some Yellow Blossom seed because in practically all areas, some mixture has taken place.

In this beautiful World Brand quality, we select the lots with the least yellow blossom in it and is the highest varietal purity that we have available. This is a perennial or two year variety.

The use of Sweet Clover is increasing again. The tremendous soil building power of this Clover is widely recognized. No other clover will do a job as quickly in rebuilding soil as Sweet Clover by using Gro-Coated Brand seed. There is nothing better than our World Brand at any price. No amount of money can give you seed Gro-Coated protection unless you get the Genuine Gro-Coated Brand seed. Look for the Blue Seal and Diamond tag to make sure you get the real article. See item number 83 on the price list.

BE SURE TO INOCULATE YOUR SWEET CLOVER SEED — SEE PAGE 15.

## MADRID — Yellow Sweet Clover

Quick Starter — Fast Grower — Big Yields — Leafier Plants

This variety of Sweet Clover has many points of superiority over ordinary White and Yellow. Every one of these characteristics are important and deserve your careful consideration.

1. It has strong seedling vigor. This means it is easier to get off to a fast start. That can be very important in getting a stand established.
2. This fast growth means a lot to your soils. An official state study showed first year growth of roots in the upper 8 inches of soil to contain 5,933 pounds of dry material compared with 4,611 common Yellow and 3,999 of White. Translated into nitrogen this means 162 lbs., 132 and 123 respectively. Figuring extra humus and extra nitrogen that indicates an increase of value of around \$10.00 per acre. Minnesota reports it will produce 35% to 40% more growth and forage the first year.
3. High yields and fine quality. It is significantly higher in yield than common Yellow. While not as heavy as ordinary White it is finer stemmed.

Plants are more leafy. It makes a splendid pasture clover and is a heavy seed producer. In Iowa tests Madrid together with later flower-

ing White varieties was superior to early flowering White. The Madrid while early blooming (about 10 days earlier than common White) was equal to the late flowering kinds in pounds of nitrogen per acre. In two tons of dry matter per acre it was also significantly superior.

Tests in South Dakota class Madrid as the best among biennial Sweet Clover with yields 50% greater than common White or Yellow.

4. The leaves withstand heavier frost than other varieties. This permits later cutting or a larger reserve of food in the roots. This is especially important through the first year and is one of the reasons it starts so fast the second spring. The heavy seed yields make it very profitable in areas where seed harvests are common.

You will be choosing wisely in getting started with this Sweet Clover. The extra cost per acre of seeding should come back to you many fold. At a minimum the crop should be worth at least \$7.00 per acre more than other varieties. We have certified Madrid which, of course, is strictly high quality. Item No. 89 on the price list. We also have a very high quality World Brand Grade non-certified which is splendid value and the kind that most farmers sow. See Item 90 on the price list. Supply limited.

## Lot SPECIAL MIX

A choice quality at a very low price. This lot "Special Mix" will usually contain more yellow than white Sweet Clover. This, however, is considered to be a point in favor of it. The yellow generally starts a little earlier and the white later so that gives a longer pasturing period if you want to use it in that way.

For soil building mixed is equally good. From a practical standpoint, results will be almost identical to regular yellow or white. In quality it is a grade between Do-More and World Brand. It sells at an additional discount because there is a little more yellow in it. It is all Gro-Coated, of course, and ready to sow, excepting that it should be inoculated. We purchased this seed at a sharp discount and are passing it on to you. We figure that gives you the benefit of these savings. See Item No. 87 on the price list for quotations.

## HUBAM

ANNUAL WHITE SWEET COVER

This is a sweet clover that blooms and bears seed the same year that it is sown. Most varieties generally do not bloom or make seed until the second year. Hubam is usually used when it is desired to plow under the crop in the same year. In areas up to central Iowa, Hubam can be sown with small grain and generally makes a seed crop after the small grain is taken off. When this is done there may be some re-seeding from seed that shattered, can be used for pasture or hay. We recommend sowing around 12 pounds to the acre. For a hay crop, it is generally cut when it is beginning to bloom. Yields of up to 4 tons per acre have been reported with a protein content of 20% to 25% on a dry basis. It can also be pastured until late in the season. It does not become poisonous. We strongly recommend that you inoculate your seed before sowing. Sow on a firm, well settled seed bed, if possible roll after seeding. See Item No. 92 on price list.

Small lots of any Sweet Clover on this page: 2 lbs., \$1.10; 5 lbs., \$1.70; 10 lbs., \$2.95.

## Lot DO-MORE

Very Special Favorite of Thousands

This lot stretches your money over more acres than any other lot. It is our lowest priced grade. Naturally, it isn't the finest for looks, but the favorable reports we are getting on it indicate its real value.

The germination per hundred seeds is lower, but there are more seeds per pound and that is why the good results are obtained. If you demand the very finest in quality buy the World Brand that is listed above. Lot Do-More is mixed but usually contains more white blossom. It is new crop seed thoroughly cleaned and scarified and is a large seller because it gives good results.

When you consider that a good growth of Sweet Clover plowed under is generally good for an increase of 20 bushels of corn to the acre, you get a better idea as to the soil building capacity of this clover. Whatever grade you might buy, we guarantee safe arrival and satisfactory quality. See Item No. 80.

# NEW G-M Hybrid Sorghums

## Advantages of G-M Hybrids

1. Increased yields — 20 to 50% increase.
2. Superior seeding vigor.
3. Rapid growth.
4. Drought tolerant.
5. Insect and disease tolerance.
6. Sturdy, uniform plants for easier combining.
7. Heavy semi-loose heads for faster drying.
8. Grown by experts.
9. Processed by experienced seedsmen.
10. IT'S GRO-COATED.

The development of Hybrids as yet has not resulted in completely pure strains. There are some slight mixtures and there are also some flow back, therefore we cannot guarantee that even in certified seed you will not find some off type plants, but we assume no responsibility or liability for presence of same in your field, and sell the seed only subject to this understanding.

### GM Brand 333

Our very earliest Hybrid — suitable for Dakotas, Wyoming, N. E. Nebraska and for late planting in other areas. It has a loose spreading head which is conducive to fast drying. Seed is brownish tan. Yields are surprisingly heavy for such an early maturing variety. It is 10 days to 2 weeks earlier than our other varieties. We know that many of our customers need an early variety like this. It will generally do away with the need for artificial drying. If you want a real early Hybrid Grain Sorghum, order our 333 Brand.

See Item 243

### R.S. 620 (GMBR 666)

Has maturity similar to the Martin Milo. It has excellent combining characteristics. The head comes up well above the leaves. We term this a dry headed or semi-open head. The grain you will harvest is light red. It has given increases of up to 50% over regular Martin. Many factors have bearing on yields but GM Brand 666 is definitely greatly superior to open pollinated lines of similar maturity. Even in areas like central Illinois Grain Sorghums yielded 80 bu. per acre vs. 10 for corn.

See Item 241

### R.S. 590 (GMBR 444)

It is a little earlier than Brand 666 and can be compared to Redbine 60 Milo in this respect. It also has good head growth and well above the flag leaf. Excellent combining characteristics. Yields 25% to 40% over open pollinated Redbine 60 are reported. Grain harvested is a very light red in color. This can be grown wherever Redbine 60 succeeds which should be into Central Iowa and areas having similar length growing season.

See Item 240

# INOCULATION

## Can Make a Tremendous Difference in Yields

All alfalfa, clovers and other legumes need a lot of nitrogen for a big, healthy growth. These plants have the ability to get their nitrogen out of the air. That is what makes them soil building crops. However, these plants cannot take nitrogen out of the air unless they have a certain strain of bacteria working in their roots. Without these bacteria they use the soil nitrogen and when that is gone the plant will turn yellow and die. On some legumes you may have some of the bacteria in the soil. You can always make sure you have plenty of the right kind if you put Berry's Nodule Germ on your seed just before you plant it. Well inoculated plants will grow up to two and three times the size of poorly inoculated ones. Yields are in direct relation to individual plant growth. There can be a tremendous difference in yield. That in turn makes your acres more profitable.

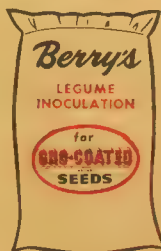

### BE SURE TO INOCULATE ALL LEGUME SEEDS

### Gro-Coated Legume Seeds Need It Too

Some have thought that Gro-Coat protection takes the place of inoculation. That is not the case. Gro-Coat treatment is for the purpose of destroying fungi that may cause seed to rot. When you inoculate seed with Berry Nodule Germ, you put live bacteria on the seed. The Gro-Coat kills only fungi and not bacteria. Therefore, you get good inoculation on Gro-Coated Brand seed. Inoculated seed should be sown at once after applying Nodule Germ or any brand of inoculation. We strongly advise against inoculation weeks in advance of seeding. You may get some nodules but not good inoculation. This can be verified by State and U.S.D.A. experiment stations.

It is a simple matter to inoculate seed. Some apply it as it comes out of the can without adding any water. The material is finely ground and adheres well to seed that has Gro-Coat treatment on it.

Some prefer to mix the contents of a bushel can of inoculation with 1/2 to 3/4 pint of water and sprinkle that on seed. It should be stirred thoroughly so each seed will get some of the inoculation. Be sure to specify the legume you wish to inoculate as there are different strains as pictures below show. We have a combination for Alfalfa, Red, Alsike and Ladino Clover. See prices at right for different kinds available.

### Berry's Nodule Germ For Gro-Coated and for Non-Treated Seed Guarantee

We guarantee this inoculant to make nodules on the roots of the plants that are grown from seed inoculated with Nodule Germ. If nodules do not form, we will refund you the price paid for the inoculation.

We have a COMBINATION INOCULANT for Alfalfa and Red Clover, Alsike, Ladino and Sweet that costs—Bu. size 60c; 2 1/2 bu. size \$1.20. Birdsfoot-Trefoil—10 pound size 25c, Lespedeza or Vetch—100 lbs. 60c. Soy Beans—2 bu. 45c; 5 bu. 65c; 25 bu. \$2.75. Field and Garden Peas, bu. 45c.

We also have NITRAGIN—Alfalfa and Clovers, 1 bu. 60c; 2 bu. \$1.05; Peas and Vetches, 100 lb. size 55c; Lespedeza, 100 lbs. 60c; Soy Beans, 2 bu. 45c; 5 bu. 65c; 25 bu. \$2.75. Trefoil, 1 bu. 60c.

# Grasses that will help you make

## TALL FESCUE GRASSES

The Tall Fescues have become great favorites in the central and southern corn belt. They have shown that they can stand more heat and drouth than Timothy, and also more heat than Brome. These Tall Fescues should not be confused with Meadow Fescue as they grow much taller and have more dark green basal leaves. These are also broader. The plant has a long growing season. Where winters are not too severe it will remain green all winter. While it is not as winter hardy as Brome Grass it will grow with as little as 15 to 18 inches of rainfall. While it prefers fertile, moist, rather heavy soil, it will thrive on many types of soils excepting those that are exceedingly light. They are moderately tolerant of alkali if moisture conditions are favorable and will thrive on quite acid soil.

### ALTA FESCUE

The Fescue Grasses will be widely used again this year as they are most reasonable in price. The Tall Fescue, which is either Kentucky 31 or Alta, can produce enormous yields and it is a grass that is replacing Brome over a wide area.

Alta Fescue is practically identical to Kentucky 31. We cannot tell them apart in looks or performance. We have wonderful values for you. See Item 149 on price list.

### KY. 31 FESCUE

This is a Tall Fescue that seems to us identical to the regular Alta. One of our men sowed some of this grass together with some Alfalfa and Red Clover. Farmers drove for miles to see it. It was on hill land. He began pasturing it in April, had 35 head of hogs on five acres all summer. It grew so fast he cut it for hay and took off 150 bales of hay, and then put the hogs back on and they stayed until in October. The leaves were still green and succulent. See Item No. 147 on price list. Small lots postpaid either above varieties: 2 lbs., \$1.10; 5 lbs., \$1.90; 10 lbs., \$3.35.

## RYE GRASSES

**DOMESTIC.** An annual fast growing grass that can be sown early in spring. Produces a turf quickly. Provides green growth in lawns and pastures while slower growing grasses in the mixture are getting established. May live over one winter. Can be sown alone for pasture. For a heavy seeding use 30 lbs. per acre. On heavily fertilized land and ample rainfall has yielded 12 to 20 tons per acre. Postpaid prices: 3 lbs., \$1.30; 5 lbs., \$1.70; 10 lbs., \$2.95. See Item No. 128 in price list.

**PERENNIAL.** Doesn't grow quite as fast as Domestic but lasts longer. Grows faster than grasses like Brome and Blue Grass but not as hardy. Also used in lawn mixtures. Do not confuse Rye Grasses with Winter Rye. These are regular grass crops. Plants grow 1 1/2 to 2 ft. if grown to maturity. Sow 20-25 lbs. per acre alone or 8 to 10 lbs. in mixture. All Gro-Coated Brand seed. Postpaid prices: 3 lbs., \$1.40; 5 lbs., \$1.90; 10 lbs., \$3.25. See Item 129 on price list.

## EFFICIENT SEED SOWERS — SAVE ON SEEDING COSTS

### CYCLONE SEEDER

This is a great favorite. It accurately distributes all smooth grass seed, clovers, grain, as well as pellet and granular fertilizer. Has an exclusive double oscillating Feed and Instant Control. Prevents waste of seed. Built for years of service. Capacity 1/2 bushel. Postpaid price \$4.95.

### A Heavy Duty SEED SOWER

Zincplated, rustproof steel is used in all the main parts. Body one piece drawn steel. No seams. No welds. No wood to split or warp. Gears sealed in a dustproof chamber and permanently lubricated. Easy to operate. Shutter adjustment is easy and accurate. An unusually strong machine. Capacity 19 quarts. Postpaid price \$8.25.

### HORN SEEDERS

The simplest of all seeders. No gears, no moving parts. Seed flows into a spout which the sower swings back and forth as he walks. This seeder is adjusted by changing the size of the spout opening and the speed of the swinging spout regulates the spreading of the seed. Hundreds in use. Capacity 1 peck. Postpaid \$1.95.

## Merion Blue Grass

A new strain of Blue Grass that has extreme resistance to disease. Stays green in summer when other common Blue Grass turns brown. Makes a dense heavy turf. There is a tremendous demand for this grass. Many people are looking for something that will give them a strictly beautiful turf. Sow 1 lb. to 400 sq. feet alone or with one of the Creeping Fescues described below. Costs more but worth it. Postpaid: 1 lb., \$2.95; 3 lbs., \$7.95; 5 lbs., \$12.85; 10 lbs., \$25.25.

## Kentucky Blue Grass

One of the finest of all pasture grasses and, of course, the basis for all good lawn grass seedings. Splendid to sow on pastures to thicken up stands. For a real good, thick, heavy lawn sow 5 lbs. to 1000 square feet in seeding a new lawn, or half that amount in renovating old stands. Kentucky Blue Grass is Gro-Coated Brand. Postpaid: 1 lb., \$1.10; 3 lbs., \$2.25; 5 lbs., \$3.25; 10 lbs., \$6.00. See Item 125.

## Red Top

A grass that will grow on soils too poor to grow most other grasses. Stands a lot of wet and also drouth. Grows rapidly, helps to prevent soil erosion on waterways. Easy to get started. Forms a turf bed quickly. Also used in combination of Timothy and with lawn grass. The seed is very small, 10 lbs. per acre is sufficient for a new meadow seeding or for lawn a pound will sow around 400 square feet. It is generally used in mixtures in lawn grasses. See Item 127 on price list. Postpaid: 1 lb., \$1.15; 3 lbs., \$2.30; 5 lbs., \$3.35; 10 lbs., \$6.25.

## Berry's GRO-COATED Lawn Grasses

### BERRY'S SUPREME LAWN SEED

This makes a fine, smooth lawn in the northern half of the United States. Contains about 60% Blue Grass, 25% Bent and 15% Rye Grasses. The quicker growing grasses provide a nice green stand while the slower kinds are coming on. It is our most popular mixture, because it gives such a wonderful satisfaction. Postpaid price: 1 lb., \$1.05; 3 lbs., \$2.10; 5 lbs., \$3.10; 10 lbs., \$6.75.

### SHUR-GRO GRASS MIXTURE

Though less expensive than our Supreme Lawn Seed, this mixture gives very good results. It will produce a quick cover of green grasses. High germinating and free from chaff. Postpaid: 3 lbs., \$1.45; 5 lbs., \$2.10; 10 lbs., \$3.95.

### ZOYSIA JAPONICA

This is often planted in the form of "plugs" but seeding is much cheaper. This is a tough, wear-resistant grass. Requires only occasional mowing. Immune to most lawn pests, crowds out crab grass. Does not require extensive fertilizing. Thrives under nearly all conditions. A pound sows around 400 square feet. Seeding instructions sent with order. 1 lb., \$3.00; 3 lbs., \$8.35; 5 lbs., \$13.00 Postpaid.

### WHITE DUTCH LAWN CLOVER

The small white clover so popular for lawns. This may be mixed with any lawn grass you have on hand or sown on an old lawn in the early spring. Very drouth resistant. Helps soil fertility. Seed is very small. A pound sows 1,000 or more square feet, depending on how heavy percentage of clover is desired. Postpaid: 1 lb., \$1.35; 3 lbs., \$3.15; 5 lbs., \$4.60; 10 lbs., \$8.75.

**CHEWINGS FESCUE.** Does well on any kind of soil. Produces a fine firm matted turf. Plant spreads by a development of new shoots and a single plant often covers an area several feet in diameter. Sow 1 lb. to 200 sq. ft. Postpaid: 1 lb., \$1.20; 3 lbs., \$2.55; 5 lbs., \$3.75; 10 lbs., \$7.25.

**HIGHLAND BENT.** A popular grass for golf courses, and used as a lawn grass. Makes a beautiful lawn. Rain will not wash ditches in your terrace, or your sidewalk will not be covered with dirt if you use bent grass. Sow 1 lb. to 200 sq. ft. Postpaid: 1 lb., \$1.05; 3 lbs., \$2.10; 5 lbs., \$3.10; 10 lbs., \$5.75.

**CREeping RED FESCUE.** Fine round bladed grass, and has a deep green color. This grass thrives on all types of soil. It maintains its color the year round and is excellent for shady places. Can withstand wear and will not winter kill. Ideal for lawns and playgrounds. Very hardy, slightly red at the base. Sow 1 lb. to 150 sq. ft. Postpaid: 1 lb., \$1.10; 3 lbs., \$2.25; 5 lbs., \$3.25; 10 lbs., \$6.00.

**ILLABEE FESCUE.** A new strain of creeping red, spreading from the roots, creeping under the ground. The texture is fine and the color is beautiful green. This strain is desirable for areas subject to heavy wear. Should be sown with a nurse crop. Postpaid: 1 lb., \$1.35; 3 lbs., \$2.95; 5 lbs., \$4.70.

See Also Above Kentucky Blue Grass, Red Top and Rye Grasses

# more profit and Save your soil

## TIMOTHY

This is one of the oldest grasses used in this country and its use is again on the increase. It is a splendid grass to use in combination with Red Clover, Alsike or Alfalfa. It is not as aggressive a competitor as Brome Grass. It helps to support the Clovers and also to check soil erosion. It is one of the easiest grasses to make a stand of. It is adapted to a very wide range of soil. Sow it around 8 to 10 lbs. to the acre and be sure to use the Gro-Coated Brand seed, then you have the greatest assurance of satisfactory results.

Twenty-five years ago some people were predicting that Timothy would fall into disuse because horses were going out. However, this grass has shown that it is much better adapted to rotation practices than others. It isn't as hard on the land. It is economical to sow. Our values are exceptional.

### WORLD BRAND GRADE

No. 79 on Price List

This is Extra Fancy quality — 99.50 purity, high germination, fine bright seed. Gro-Coated Brand which guarantees better stands. See page 2.

### DEALER'S FANCY GRADE

No. 78 on Price List

Highest quality new crop bright unhulled Timothy. Discounted because it runs about 2-3% Alsike Clover.

Other grade, postpaid: 2 lbs., \$1.19; 5 lbs., \$2.19; 10 lbs., \$3.95.

## BROME GRASS

One of the most valuable of all grasses. From Kansas to the Dakotas and east across the nation it is a wonderful grass. Starts growing early in the spring. Yields more than most any other grass. Is very palatable and very nourishing. Retains its palatability even when it gets a little old. Makes good hay and splendid pasture.

You can graze it heavily but if you have an excess of growth just let it stand. It will retain its palatability and stock will eat it later.

Prefers a loam soil but has given good results on sandy soils if not too low in fertility. Moderately resistant to alkali. We do not recommend it for wet land but it will stand some overflow for a few days. Also stands quite a lot of silting and comes up through a heavy deposit if it is a well established stand to start with. Splendid for terrace cuttings and grass waterways because it has a dense spreading root system. It uses a lot of nitrogen therefore it is generally sown with Alfalfa to keep up the nitrogen content of the soil. Otherwise you should apply nitrogen fertilizer.

A combination of 15 lbs. of Brome and 5 or 6 lbs. of Alfalfa per acre is excellent for pasture. For hay 10 lbs. Brome and 8 lbs. Alfalfa is a popular choice. Sow around 20 lbs. to the acre when sown alone.

## EXTRA FANCY LINCOLN BROME

This is a leading strain of Southern Brome. Will stand hotter weather than the Canadian and is a faster grower, more aggressive. It is hardy anywhere in the United States. Our Extra Fancy quality is really beautiful new crop seed. It measures up to the top of standard purity grade of 90%, and the germination averages 85%. That is exceptionally good for Brome Seed. This is heavy weight seed. If you demand the very best in quality you will be delighted and the seed has Gro-Coated protection, too, so you have extra assurance of getting better stands. With prices drastically below last year's the seedling cost has dropped to very low figures. See Item 137 on price list. Postpaid: 3 lbs., \$1.39; 5 lbs., \$1.95; 10 lbs., \$3.45.

## FANCY LINCOLN BROME

This is exactly the same variety as the Extra Fancy. Has the same high purity but is a few points lower in germination, or 75%. This is still very satisfactory for these grasses do not normally germinate high like legumes. This Fancy grade will compare very favorably with that which is sometimes sold as the best grade. It makes possible a still lower seeding cost. See Item 138 on price list. Postpaid: 3 lbs., \$1.33; 5 lbs., \$1.85; 10 lbs., \$3.25.

## ORCHARD GRASS

This is a grass of such outstanding qualities that, once you start growing it, you'll probably never do without. Because of its name, you might think that it is only for orchards or shady places. It is true that it does grow in the shade better than most grasses but it is most assuredly a grass for meadows and pastures over a wide area. We recommend Orchard Grass as a wonderful grass to use with or in place of Brome Grass.

### Excels in Early and Mid Summer Growth

Orchard Grass is one of the very first to start up in the spring. Often you are anxious for some early pasture. You will be delighted with the lush early growth of this plant. There are other grasses that will start quite early but by mid summer they are in a somewhat dormant stage. Not so with Orchard Grass. It will generally afford more mid summer pasture than any perennial grass in the northern half of the nation when moisture conditions are at all favorable. It will stand more heat and drought and grow on soils of lower fertility than Timothy or Brome. It is quite cold resistant and continues its growth until severe frosts.

Orchard Grass does not form as dense a sod as Brome. Alfalfa and Clovers are not crowded out so fast by aggressive sod formation. If you make grass silage, a combination of Orchard with Red Clover and Ladino can be taken off real early. Then the rapid recovery of the Orchard will produce an abundance of high quality summer pasture when most other permanent pastures are unproductive.

You may use other grass and legume combinations that will give you an equal tonnage but Orchard Grass gives it to you when you need it most. By all means use it in your pasture seedings. It also makes good hay. By itself 1 to 2 tons per acre or in combination with alfalfa 2 to 3 tons or more are obtained.

Sow 16 to 20 lbs., Gro-Coated Brand seed per acre or with a seeding of Red Clover or Alfalfa 10 to 12 lbs. with 4 lbs. of Clover or 6 of Alfalfa. There is considerable variation in quality of Orchard Grass seed. We handle only the finest imported Danish or domestic qualities. Price postpaid: 2 lbs., \$1.25; 5 lbs., \$2.40; 10 lbs., \$4.35. See Item 142 on price list for larger quantities.

## Reed Canary Grass

*A Remarkable Perennial Grass Grows on Upland as Well as Very Wet Land*

This is a leafy, palatable grass that will yield 3 to 5 tons of pure hay per acre in two cuttings. It will grow on land so wet that cattle would bog down on it and yet make a sod so strong that it will support a team and wagon. It grows from early spring until late fall. If not cut, it will obtain a height of 5 to 6 feet. Oftentimes the grass is allowed to stand until the seed heads come out, the seed harvested and then the undergrowth is taken as a hay crop. It maintains its palatability for a long period of time. Reed Canary Grass is also adapted to a wide area. It is grown from the Atlantic to the Pacific, as far South as Eastern Tennessee. Fall seedings can be made August into September. Some prepare a seed bed in the fall and sow it very late so that the seed will not germinate until the next year. That is generally in the month of October, depending upon where you are located. Sowing it earlier in the fall, of course, will establish the grass to give full production the following year. While it is an especially fine grass on the wet land conditions in Iowa, we have found it remarkably good on uplands. Ask for our circular on Reed Canary Grass, it will give you more detailed information.

Reed Canary Grass is in short supply again this year. We buy only the highest germinating lots 60% and higher which when Gro-Coated will give satisfactory results. See Item No. 141 on our price list for quotation. Small lots, postpaid: 1 lb., \$1.25; 3 lbs., \$2.55; 5 lbs., \$3.85; 10 lbs., \$7.25.

# Tops for Grain and Pasture

## SPRING BARLEY

### KINDRED or L. BARLEY

There are many barley varieties. Some are called feeding barleys, others malting barley. A malting barley is good for feed but a feeding barley will not be accepted by maltsters. It is desirable therefore to get a malting barley that has excellent yielding records. Then you are sure of a good market if you want to sell it as a cash crop.

We have checked many varieties to find the one best barley adapted to the widest possible area. This Kindred, or "L" barley as it is sometimes called, is in our opinion the variety that for all its all around adaptability is above all others. In a 4 year Iowa test it matured earlier than Wisconsin 38, Moore and Montcalm. Had a heavier test weight and outyielded all of them.

This is a variety that is adapted over a very wide range and is highly endorsed by many sources. The Midwest Improvement Association has urged the sowing of this Kindred or "L" Barley. It is a number one choice of the majority of maltsters and brewers. It is recommended by Illinois, Iowa, Minnesota, Wisconsin, North and South Dakota. It is mid-season in maturity, has rough awns, very good resistance to stem rust and has a good straw, although not the number one straw, it is not as strong as some other varieties, but this is far over matched by its splendid characteristics. If you want a splendid malting barley this is the one to select. It is also good for feed.

Barley is a better nurse crop than most grains for grass and clover seedings. Its early maturity and heavy yields make it a profitable and popular grain crop.

We suggest sowing 2 bushels per acre and make the seeding early in the spring.

There are a good many farmers that like to grow Barley and Oats mixed. Cherokee or Nemaha Oats are often used. Some even add spring Wheat. See Item 191 on the price list.

## Spring Wheat

### HEAVY YIELDING LEE

We are always looking for the best varieties of new grains, as well as grasses and legumes. We have checked on many varieties of Spring Wheat and have chosen Lee as the best milling wheat for the majority of our customers. Reports have ranked it materially better than others in all around performance and it has excellent milling qualities.

The Iowa Station reports the Lee as the most resistant of the spring varieties to leaf rust and states it is a high yielding variety that stands up well. It is of medium early maturity, bearded, classed as a hard red spring wheat.

The seed that we have is the finest quality northern grown stock, and that is the kind that you should select. Sow Spring Wheat as early as you can get it in the ground. It can go as far south as southern Iowa if it is sown early and the season does not get too hot too early. Normally it is for central Iowa and north in the Spring Wheat area. See Item No. 198 on the price list.

## HENRY SPRING WHEAT

### A FINE FEEDING VARIETY

At the time of this writing we understand plans are to allow farmers a larger wheat acreage if they will feed the grain on their farm. For this purpose we know of no variety of spring wheat as good as Henry. This is not a good milling wheat but an excellent feeding wheat. Gives big yields and high feeding quality. It is a bearded grain, medium late in maturity, has tall medium stiff straw and is moderately resistant to stem rust, leaf rust, smut and black chaff. We believe that there is a definite need for this type of wheat in a large part of our customer trade area. The Henry which we carry also is northern grown seed stock. See Item No. 199 on price list.

## Dwarf Essex RAPE

### Cut Pork production costs with Rape pasture

This is an annual crop and a very rapid grower. It can be pastured within 6 to 8 weeks after seeding. The leaves look somewhat like cabbage leaves but the plant does not make any head. It is equal to Alfalfa in feeding value for hogs and sheep. You can cut down on the amount of grain required and get your hogs to market quicker if you have good Rape pasture available. Tests at Iowa indicate that you cut more on grain consumption and tankage on Rape pasture than when they were fed Alfalfa and more head placed per acre.

Under favorable conditions it can yield up to 80,000 pounds of green matter per acre. On a dry basis analyses as high as 37% protein. Provides pasture from early spring until the ground freezes in the fall. Can be sown any time from early spring, about oat seeding time or slightly later, until mid-summer. Will give best results on land of good fertility and a reasonably good supply of moisture. The cost of seeding is very low. Only requires 5 to 6 pounds of good seed per acre. Gro-Coated Brand. Small lots, postpaid: 2 lbs., 95¢; 5 lbs., \$1.60; 10 lbs., \$2.75. See Item No. 233 on price list for quotations.

### Amazing Crops From "5-Year Blend" Alfalfa

I have used Berry's seeds most of my twenty-three years of farming, and have liked them better than any other. But since Berry's started Gro-coating their seed, it's absolutely the best seed that can be bought anywhere. I cut three crops of your "5-Year Blend" Alfalfa this year, and it's wonderful.

—WM. A. LANGE, Marquette, Iowa

### Never Had a Failure

I have used Berry's Seed for ten years and never had a failure. I raise Nemaha oats and get 80 bushel per acre from Berry's Blue Seal Processed Oats. I raise Registered Oxford sheep and it takes both high quality stock to produce either seed or livestock.

—ELMER HAYMAKER, RFD No. 5, Washington C. H., Ohio

## Speltz

A great drouth resisting grain. This is a spring Speltz, or Emmer, the picture shows just what the grain looks like. It is really a type of wheat and very nutritious. The shucks cling to two grains which each carry. The grain is a little softer than wheat. Makes wonderful ground feed. Yields well and is very profitable especially under dry conditions. It is one of the most drouth resistant of all grains. It is resistant to most races of rust and practically immune to smut. This grain is grown from Canada to Texas; through Iowa, Minnesota, Wisconsin and Michigan. States to the east are growing it as well, and it's popular in western states where drouth conditions are most apt to prevail.

The demand from central and eastern states has increased greatly during the past few years. Farmers have been getting good results in dry seasons and their neighbors like it. During the past two years our supplies of Speltz became exhausted before the season was over. This year our supplies are larger but early inquiries indicate there is going to be a tremendous demand so we urge you to order your Speltz early. Do it now and avoid disappointment. We have some very fine quality seed for you.

The seed is sold on the basis of 40 lbs. to the bushel. About 2½ bushel per acre are sown in the spring. Sow as early as possible. It matures quite early. Cut it before dead ripe, and thresh it about like oats. Speltz is one of the oldest grains known to mankind. Was apparently introduced in America by German-Russian immigrants. Has extremely strong straw that makes it especially valuable as a nurse crop. See Item No. 202 on the price list.

# EXTRA QUALITY OATS

## Clean, Pure, Heavy Seed

There are many steps between the oats as they are harvested in the field and the extra heavy quality seed you get from Berrys. It requires four different kinds of cleaning and grading and treating machines. In the processes we not only remove trash and weed seeds but also light oats, pin oats and many grains that are left in seed that gets an ordinary cleaning. We aim for a quality that is superior to that called for in most certification requirements. Experience has taught us that such seed makes stronger plants and bigger yields. You are making an investment when you get your seed oats. Make it a profitable one.

ALL OUR SEED OATS ARE TREATED

## An Investment That Pays Big Dividends In Better Yields

You have certain costs in raising a crop that remain about constant. Your rent or interest on your investment. The labor costs and depreciation on machinery and each acre's share of the overhead expenses of the farm like insurance, gas, taxes, new productive labor, etc. do not vary a great deal. You have these costs whether you harvest 25 or 75 bushels per acre. It may require a yield of 30 to 40 bushels per acre just to pay these costs. It is the yield over those "cost bushels" that makes your profits. Berry Extra Quality Oats will give you greater assurance of Profit Bushels. In our tests we have taken a variety and divided the seed. One half got an

ordinary cleaning and treating job, and the other received the Berry Extra Quality treatment. Those Extra Quality Oats looked almost like a different variety. Heavier stalks, more prolific stooling and most important, produced much bigger yields.

Yes, such seed costs more per bushel but you can sow at a somewhat lighter rate. Even so it costs more than bin run oats but when you come to figure yields and Net Profits you will find that you have made a profitable investment by purchasing Berry Extra Quality Seed Oats. Our varieties are selected to suit our customers in practically every section of the spring oat area.

## Varieties That Are Adapted To Wide Areas

### Certified MINHAFER

#### SENSATIONAL NEW VARIETY

It has been years since a new oat variety has been developed that has been as outstanding as Minhafers this year. Farmer after farmer has reported 90-95-100 and more bushels per acre. Man, such quality! Forty pound test weight as they came from the combine. That is what most of our seed stock tested.

What makes it so outstanding? Bred in yielding qualities for one thing. Unusually high resistance to stem rust and crown rust. Early maturity is a factor. In a year like last year these characteristics combine to put it way above the average in performance. This is no flash in the pan variety but one that should maintain its supremacy for a good many years. It is somewhat like the Andrew but far superior in resistance to lodging and rust.

This oat seems to be adapted to a wide area for this rust problem is quite a factor in many sections. When you have that, plus strong straw, plus early maturity, plus heavy yielding ancestry, you really have something to give you profitable results. It is of Minnesota origin but not late like some northern varieties. We haven't seen anything to equal them in a long time.

The supply of these oats is still quite limited, so we urge you to place your order early. See Item 163 on price list for quotations. Later in the season, if we get sold out, replacement stock (if we can get it at all) will unquestionably be materially higher in price. Our certified seed stock is unusually nice. It will run ahead of most certified stock because we clean it heavier than necessary. We want you to have something extra nice and you'll get it.

### CERTIFIED CLINTLAND

The Clintland is a relatively new oat variety. It is in many respects similar to the old Clinton with a very important difference. The Clintland has bred in resistance to all North American races of crown rust known to date. It was developed at Purdue University by using a new technique. The crown rotters incorporated this resistance to crown rust by back crossing the original cross of the Clinton three times. In an Iowa test at nine locations the Clintland yielded thirteen bushels more per acre than Clinton and had a four pound heavier test weight. The variety is resistant to the common races of smut and races 1, 2, 5, 8 and 10 of stem rust but it is susceptible to race 7. The crown rust has long been one of the most important oat diseases. It is estimated in Iowa that it has caused an average annual loss of 11% in oat crop while stem rust caused only 2% loss. We are sure that you will be delighted with the quality of seed that you will receive. See Item No. 167 on price list.

### NEWTON OATS

It was developed by the Purdue University Agr. Exp. Sta. and U.S.D.A. It is adapted to all of Iowa, Illinois, Indiana and in all states having similar conditions. It has an exceptionally strong, medium-tall straw. Newton have also shown striking superiority when grown in hot seasons. In 1953 it outyielded other leading varieties by 20 bushels. It is resistant to race 7 stem rust and moderately resistant to crown rust. It is also resistant to smut diseases and blight. The grain of Newton is of high test weight. It has large plump groats (meat). Newtons are of mid-season maturity. If you have rich or highly fertilized land by all means grow Newtons. This is an exceptional variety and we have excellent seed for you. See Item No. 177.

### GOLDEN BEAUTY BRAND CLARION

#### Guaranteed to Outyield Any Other Clarion Seed Stock

Our Golden Beauty Brand of Clarion represents a grading that goes even beyond our Extra Quality Process. They are extremely heavy. In cleaning they are shrunk 10% to 12% more than even our other seed oats. This enables us to give you an oat of exceptionally heavy test weight in which only the largest grains go to you as seed. This, of course, means healthier, robust plants and germinations of around 99%. Sow our Berry's Golden Beauty Brand Clarion next to any other Clarion. Keep records of yield at harvest time and if our Golden Beauty does not outyield the other, we will refund you the difference between what you paid us for oats and the cost of ordinary Certified Clarion. These oats have a splendid record of production, have a fine meaty grain, very strong straw and exceptionally disease resistant. We guarantee Golden Beauty to be Clarions at their best. See Item 174 on the price list.

### Certified NEMAHA Re-Select

This is a reselection of the original variety. In fact Iowa would not certify Nemaha until the selection had become purified. Now it ranks as one of the leading early oat varieties. Practically identical to Cherokee. Illinois reports it's resistant to all common races of leaf rust except 45 and 57 and it has tolerance to those. Resistant to Helminthosporium and to race 8 of stem rust and smut. Straw medium stiff.

The quality of the grain is wonderful. It looks like some of those heavy Canadian oats. They are far superior in the corn belt. They mature early and fill better. Like Cherokee it is meaty, thin hulled. In northern areas they do as well as most of the later varieties and farther south they generally are superior in yield. See Item No. 168 and 169 on the price list.

### Certified Re-Select CHEROKEE

This certified seed is made from a reselection of the original variety. It has higher varietal purity, more uniformity and is all around superior. It is a little earlier than Clinton and straw is somewhat shorter. Grain has pinkish ivory color with a heavy test weight. Its early maturity is a big advantage in many areas. Has moderate tolerance to race 45 crown rust. Resistant to race 8 stem rust. Susceptible to race 7 and septoria black stem blight.

Be sure to ask for the sample of these oats. You've never seen anything finer and delivery on any variety will be as good or better than sample. For Cherokee at their best choose our "Extra Quality" Certified seed. See Item No. 170 on price list. Extra Fancy Non Certified Item No. 171.

# Berry's GRO-COATED Hybrid Corn

## WE HAVE A HYBRID TO FIT YOUR FARM

During the past twenty years we have grown, and our research associates have developed many hundreds of Hybrids. The eight that are listed below are the very best of all. The 405 and 425 are earliest for areas like Southern Minnesota, Wisconsin, Northern Iowa, Illinois and similar areas as main crop for farther south when delayed planting or early maturity is desired. 525 is about 5 days later, 615 and 618, 5 days later with 813 and 825 in the 115 to 120 day type. Read the individual descriptions. Here are hybrids for different soils. Everyone of them a leader in its class. Select one or two of these numbers. Grow them next to the very best you have found thus far. We believe you will find here in the "Cream of hundreds", the best variety you have ever grown. See price list for quotations, on these numbered varieties. The price on blends on this page do not apply to these 8 varieties.

### 813 115 to 120 Day Type.

Contains an extra-line designed to give a longer pollinating period. Takes hot weather very well. Stiff stalks. Medium length shanks. Deep kernels, well filled ears. Adapted to heavy planting rates. A great corn for areas east and west across the nation having weather conditions similar to the southern third of Iowa and on south into Missouri. Flats \$11.75 bu. Rounds \$8.75.

### 825A 112 to 120 Day Type.

The chief of our corn breeding program considers this the best variety in its maturity range that he has developed. Strong roots, extra stiff stalk, has a very high yield record. Ears are well covered and hang on well. Withstands corn borer infestation. Grain is deep, Shank short. Adapted to a wide range of soils. This is a dandy. Try some. Flats \$11.75 bu. Rounds \$8.75.

### 618 110 to 115 Day Type.

This variety has surpassed all others in this maturity class. It is our newest release and is outyielding even the slightly later 825. Not once in a dozen years is such an outstanding variety developed. Excellent stalk growth. Drought resistant and disease resistant. Big eared, high feeding value. From north central Iowa down south into Missouri and to the east and west it is a surpassing hybrid. If you try only one, make it 618.

Year after year on practically every type of soil 618 continues to stand out above all other Hybrids we have tested. No matter what varieties you may be using, we urge you to try some of our 618. Compare it with the very best you have. We believe you will be just as enthusiastic about it as other farmers who are making it their main variety. Flats \$12.25 bu. Rounds \$9.25.

### 615B 107 to 110 Day Type.

Medium Early. Ears fully covered with husks. Medium height, strong stalks. Kernels quite deep and have a reddish tinge on sides. Ears hang on well. It is adapted to a wider area of soils than any hybrid in this class that we have ever seen. Yields as well as later maturing kinds. Its earliest maturity is in its favor. Remember, it is one of the 8 of the very best we have found. Flats \$12.25 bu. Rounds \$9.25.

### 525 100 to 105 Day Type.

This is another of the earlier maturing lines that is crowding many of a longer season hybrid for yield and all around performance. Earlier maturing often escapes heat damage. Farmers in Kansas find such a variety the best they can plant even though it is a variety designed for areas like Eastern Nebraska, North Central Iowa and similar areas in Illinois, Indiana, Ohio and east. Tolerant to borer. Deep grains, small cob. Flats \$12.25 bu. Rounds \$9.25.

### 405 95 to 100 Day Type.

Stiff leafy stalks. Good lodging resistance. Medium long shank. Ears of good-length borne at medium height. A good main crop corn for Northern Iowa and areas having similar climate. Used further north for ensilage and farther south for early maturity or delayed planting. This corn has given extraordinary performance, as far south as North Carolina when used in this manner. Flats \$12.75 bu. Rounds \$9.75.

### 425 90 to 95 Day Type.

This is one of our earliest hybrids. We do have a 401 which is about 10 days earlier available at same price. See loose price list enclosed. Our 425 has exceptional standing ability. Has an extra stiff stalk. Medium length ear with good depth of kernel for such an early variety. Has marked tolerance to corn borer. It is at its best on land of high fertility, quite good for heavy planting rates. An outstanding corn in its maturity range. Flats \$12.75 bu. Rounds \$9.75.

## ACCURATE GRADING

We use a system of handling and grading that handles the corn as gently as possible and turns out grades that are very accurate in planting. You will find this to hold true of both the Flat and the Round grades. Good grading is generally accepted procedure but even so we have had many farmers tell us corn was graded the best of any that they had ever planted. This naturally helps to assure more uniform stands and better crops.

## TESTED SEED PROTECTION

All seed has Berry's Gro-Coat treatment to provide almost perfect protection against seed rot and is also designed to stimulate early root growth.

WRITE FOR  
SPECIAL QUANTITY  
PRICES ON ANY  
VARIETY, GRADE OR  
BLEND.

## FASTER GROWTH

This test is made by planting the same variety, part Gro-Coated and part not, under identically the same condition to show the rapid growth factor. The Gro-Coated seed came up quicker and grew faster. This is very important in the life of a young plant to have it get off to a quick start. You can cultivate it quicker. You will have a healthier, more vigorous plant.

## BIGGER ROOTS

This shows a root development of the same variety of corn planted under identical conditions and with the root measurements taken on the same day. The Gro-Coated Brand kernels had secondary as well as primary and even the brace roots were starting to form.

## BERRY'S Famous BLENDS AT MONEY-SAVING PRICES

### REGULAR FLAT

Many of our most enthusiastic reports come from farmers who have planted one of our blends. In producing these blends we combine hybrids that come fairly close together in maturity and yet have enough difference to spread the pollinating period over more days than the average straight hybrid will give you. This can make a tremendous difference in a year when the weather is very hot while corn is pollinating. Heat kills the pollen before it falls on the silk and that pollen can't produce a kernel of corn. The silks remain receptive to pollen for quite a period. By giving a prolonged pollinating season you get in these blends a greater assurance of better filled ears, and therefore frequently greater yields.

In producing these blends we use all varieties of our own production, such as those listed on these pages. We make a specialty of these blends by putting extremely low prices on them. They are available in four kernel types as listed below.

This is a regular grade that is most generally used in planting. They may be an occasional oil colored kernel but the germination will run 90% or better. This comes in the Late maturing Blend only — 115 to 120 days.

### SMALL FLAT

Graded for accurate planting but consisting of shorter kernels. A bushel will plant more acres and it is just as productive as the larger kernel size. Available in Medium Maturing (105-110) days or Late Blend (115-120) days.

### THICK FLAT

This is composed of kernels too long to be classified as Round and too thick to make Regular Flats. It produces very strong, vigorous plants. This grade is one of our best sellers and at our low price an exceptional value. Available in Early Medium Maturing (105-110) days or Late (115-120) days.

### ROUND

This, as the name indicates, is for kernels approaching the round shape. They are graded for accurate planting and good uniform stands can be obtained.

## PRICES ON BERRY'S BLENDED CORN

MEDIUM MATURITY		LATER MATURITY	
Regular Flat	\$8.75	Regular Flat	\$8.50
Small Flat	\$7.50	Small Flat	7.25
Thick Flat	6.75	Thick Flat	6.50
Round	6.25	Round	6.00

By number in left hand corner.

# FORAGE Crops for Hay & Grain

## SUDAN GRASS

### GREENLEAF SUDAN

A new variety that has excellent vigor and greater leaf disease resistance. It has a higher percentage of leaves than most varieties. They are darker green in color, yet have a low hydrocyanic content which means less danger of prussic acid poisoning, matures later than most. Under drought or other unfavorable conditions, Piper may grow taller but much of that is stems. The high percentage of leaves, higher protein content and disease resistance makes it a superior variety for this area. See Item 228 on price list. Postpaid prices: 2 lbs., 90¢; 5 lbs., \$1.45; 10 lbs., \$2.45.

## SWEET SUDAN

This variety ranks very high in popular favor. It was produced by crossing regular Sudan with Loola which is a sweet juicy sorghum. This Sweet Sudan takes in some of the finest qualities of both crops. It grows very much like ordinary Sudan, it stools even more freely, and grows taller. The leaves are a little broader. It is a sensational yielder. We have reports that it has outyielded regular or common Sudan by 30%. See Item No. 231 on price list. Small amounts, postpaid: 2 lbs., 85¢; 5 lbs., \$1.40; 10 lbs., \$2.35.

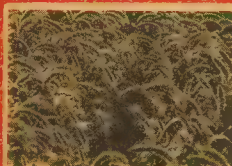

## Certified PIPER SUDAN

This variety was developed in Wisconsin. There are many farmers who rate this as the best variety to grow. It is not as sweet as the Sweet Sudan in flavor but still is a very palatable crop. Piper Sudan resists foliage diseases better than common Sudan and stays green longer. It is also claimed to be lower in prussic acid than other Sudans.

It seems to be definitely adapted to cooler climates. That alone is a very important feature for our customers in northern areas. Excellent results have been obtained from this variety in states like Wisconsin, Minnesota, Iowa, Nebraska, New York, Pennsylvania, and other corn belt states. The young plants have a very strong seedling vigor, and it is important to get young plants out to a quick start. The crop makes a good recovery after grazing and it is very satisfactory to livestock as a feed. Makes best hay if cut when in bloom. See Item No. 229 on the price list. Small lots, either variety, postpaid: 2 lbs., 95¢; 5 lbs., \$1.55; 10 lbs., \$2.65.

## Billion Dollar Grass or JAPANESE MILLET

This is a tall growing variety of millet. It has produced phenomenal yields. Makes as high as 50 thousand pounds of green feed per acre. Seed yields, as high as 1 thousand and even up to 2 thousand pounds per acre. Prefers fertile soil fairly well supplied with moisture. Will stand cooler growing conditions than Sudan Grass. It does not stand as much heat and drought as Sudan yet we have seen some wonderful production even in dry years. The crop is grown in Iowa and states to the north and east, including the New England states. Farther south we consider Sudan and Golden Millet or Cane better. Will generally make a hay crop in 6 to 8 weeks after seeding. Does not develop prussic acid at any stage. Do not sow until the ground is thoroughly warm, around corn planting time, and can be sown as late as June or July if moisture conditions are favorable. Will grow up to 6 or 8 feet high on soil of good fertility. We generally run out of Billion Dollar Grass seed, so we urge you to place your order early. Postpaid: 2 lbs., 80¢; 5 lbs., \$1.25; 10 lbs., \$2.10. See Item No. 232 on the price list for quotations.

## HEGARI

This is a grain sorghum that grows to about 4 1/2 feet high. Height may vary according to soil and season. Matures in about 110 days. It produces high yields of grain. Grain is white in color with brownish spots. Heads are cylindrical 7 to 8 inches long and about 3 inches in diameter. The fodder is very palatable to livestock. Sometimes the entire plant is cut and shocked and fed during the winter. It is not as drought resistant as some of the other grain sorghums but more resistant than corn. See Item 217 on price list. Postpaid prices: 2 lbs., 80¢; 5 lbs., \$1.20; 10 lbs., \$1.95.

## Pork Producer

This is a special mixture of legumes, forages, and grass crops that will grow quickly and produce a lot of feed. It can be sown early in the spring. You can pasture it within a few weeks after seeding. It is very productive, high in protein. It helps to build big body frames and reduce grain consumption. It makes hogs of marketable size in quicker time. It contains Vetch, Rape, Rye, Barley, Oats, Wheat, etc. Sow 50 to 80 pounds per acre early in the spring. This seed does not come Gro-Coated. See Item No. 234 on price list. It gives you a splendid variety of early feed. Postpaid: 2 lbs., 80¢; 5 lbs., \$1.20; 10 lbs., \$1.95.

## ATLAS SORGO

A highly drought resistant crop that we might term as being a sweet stalk grain sorghum. Produces tremendous yields of fodder. In dry seasons it has out-produced corn and grain yields 3 to 1. Juice from the sorgo is very sweet. It is palatable and very nutritious feed. Corn if injured by drought will stop growing, but Atlas on the other hand will start up again. Also highly resistant to grasshopper damage and will grow 10 to 12 feet tall. It has good resistance against lodging. Plant 8 to 12 pounds per acre at corn planting time or after, in rows 40 inches apart. Often cut before frost and shocked to cure. Good for ensilage, too. All this seed is Gro-Coated. Item No. 220 on our price list. Small amounts, postpaid: 2 lbs., 80¢; 5 lbs., \$1.25; 10 lbs., \$2.10.

## NORKAN

This is sometimes referred to as Early Atlas because it resembles it in many ways. Matures about 10 days to 2 weeks earlier. Can be grown farther north. In areas south of central Iowa or similar directions Atlas would produce more tonnage. For shorter seasons Norkan would be a better selection. While stalk growth is not as tall the grain yield generally equals it. This is a cross of Atlas Sorgo and early Sumac Cane. See Item No. 221 on the price list. Postpaid price on either: 2 lbs., 80¢; 5 lbs., \$1.25; 10 lbs., \$2.10.

## MILLETS

### German or Golden

This is a heavy growing variety that is one of the heaviest producers of the regular German type Millet. Its leafy growth may obtain a height of 4 to 5 feet. Yields as high as 4 tons per acre are reported and seed yields 25 to 40 bushel to the acre. Feeding value of the hay is similar to other grass crops. It is an excellent crop to use where you want something that will mature in a short time. Don't plant it until after corn planting time. It wants warm weather and warm soil. You can plant it later if that is necessary. Will make a hay crop in about 50 to 60 days depending upon conditions. For hay crop sow 35 to 45 lbs. and for seed crop you can sow a little less. Makes the best hay if cut before blooming. Not too good for pasture because it is shallow-rooted. You can cut it for seed when the seed can be rubbed out of the heads by hand. Let it get thoroughly ripe if you wish to combine it. We have some splendid Gro-Coated Brand seed for you. See Item No. 225 on the price list. Small amounts postpaid: 2 lbs., 85¢; 5 lbs., \$1.30; 10 lbs., \$2.20.

### Proso or Hog Millet

This is also sometimes called Broom Corn Millet. It is used almost exclusively for seed. It is a very prolific producer and the seeds are larger than other millets. Makes good chicken feed. About equal to Barley in feeding value. Yields up to 60 to 70 bushel per acre are reported. It matures early, producing a seed crop in 60 to 70 days. Makes a good cash crop for a short season. Sow 40 to 50 lbs. per acre. See Item No. 227 on the price list. Postpaid, either variety: 2 lbs., 75¢; 5 lbs., \$1.40; 10 lbs., \$2.65.

## REDBINE 60 MILO

This is a new variety of Grain Sorghum. It's a short season drought resistant grain crop. The feeding value of this new grain sorghum is comparable to corn. A heavy producer, does well in dry seasons. Its yield is approximately the same as corn, on land that will produce 50 to 85 bushel corn. On land that produces better than 85 bushel, the sorghum's yield is somewhat less. The grain sorghum is not susceptible to attack by corn borers, grasshoppers or harmful soil insects such as root worms.

It is red seeded, blooms in 60 days and matures early. The kernels are large. It will average 3 to 3 1/2 feet in height. It can be harvested before frost, and its size permits the use of the combine in harvesting.

This grain sorghum is a wonderful crop, particularly in areas where rainfall is generally short. Postpaid: 2 lbs., 75¢; 5 lbs., \$1.20; 10 lbs., \$1.95.

## NORGHUM

This is also a combine grain sorghum originated in South Dakota. It is the earliest of these grain sorghums that we have. It is relatively a new kind, produced by crossing several other varieties. It has an open type seed head that sticks high up above the leaves. Head dries out well, ideal for combining, sturdy stalks, resistant to lodging. An excellent record of grain production and is demonstrated to be of splendid feeding value. Drill eight pounds per acre a little after corn planting time, 36 to 40 inch rows. All Gro-Coated Brand. See Item No. 219. Postpaid: 2 lbs., 80¢; 5 lbs., \$1.25; 10 lbs., \$2.10.

# QUALITY PRODUCTS

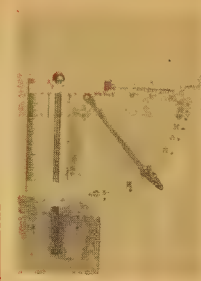

# FOR YOU AND YOUR FAMILY

## THE WEATHER-VANE FEEDER SWINGS WITH THE WIND

Keeps minerals, salts, concentrates and vitamins dry in all weather. Ball bearing assembly turns with the slightest wind. Contents of feeder are always protected against driving wind, rain, snow or straight down rain. Feed is available to animal at all time. Holds 100 pounds. Wood box prevents mineral deterioration. Think of the feed you can save, especially on expensive minerals. It is extremely easy to set up. The galvanized steel hood gives long life. Has a zerk fitting for easy greasing. Shipping weight 54 lbs. This is a feeder approved by Successful Stockmen. Savings in mineral feeds will soon pay its cost. It should give many years of service. Priced at \$24.95 delivered.

## WEATHER GAUGE Educational — Fun to Watch

Measures rainfall, has indicator for accumulating rainfall for any given period. Gives temperature, also wind direction and speed. Accurately calibrated by National Testing Laboratory, easily mounted. Price \$1.50, postpaid.

## WIKOMI POWER SEEDER Exclusive New Features Easy to Attach

Here is an all new power seeder, one man can install it on tractor as illustrated. It has an exclusive flexible shaft which runs the broadcast unit from power take-off. A capacity of 1 1/2 bu. which can be increased to 2 1/2 bu. by the addition of an extension hopper. There are no difficult adjustments or alignments to get out of order on this new seeder. It sows all grasses, clovers and other seeds quickly and evenly. A real buy at \$59.95, delivered direct to you.

## TREE WOUND PAINT

Save your valuable trees. Paint cracks, splits, and also open wounds after limbs have been removed from the main trunk. It is extremely effective and easy to apply. \$1.50 pint bottle each or \$2.25 for a quart bottle, postpaid.

## MINUTE-MAN EGG WASHER DETERGENT

This is a special formula detergent developed just for cleaning eggs. Removes surface bacteria and retards egg spoilage. Complete directions on box telling proper ratio of detergent and water. 5 lb., postpaid, \$2.50.

## EGG WASHER

Clean eggs bring you more money. It is easy to have clean eggs with a Dare Minute-Man Egg Washer. All electric, operates on 60 cycle 110 volt AC motor. Washer averages 80 oscillations per minute throughout cleaning. As shown in picture, contains plastic coated egg gathering basket which will hold 12 to 15 dozen eggs. Recommended capacity for washing eggs, 7 to 10 dozen. Plastic coated egg basket sets in a galvanized washing tub, 18 quarts capacity. The galvanized washing tub sets on a strong steel base with motor and agitator mechanism enclosed. The motor works off any household outlet. Here is an item that will not only save you time and labor but will also bring you extra profits by having cleaner eggs. See Egg Washing Compound to the left. Price for this wonderful labor saving device only \$18.95, postpaid.

## TRACTOR EXHAUST CAP

Do you have trouble with snow or rain getting into your tractor motor through your tractor exhaust when your tractor is idle? Practically every farmer has. Here is a small item that will stop this worry for the life of your tractor. This exhaust cap opens automatically when the engine is started and closes when the engine is not in use — keeping out rain, dirt, insects, etc. Thus eliminating warped valves and damage to muffler and motor. The small amount that you may spend on this exhaust cap will save you many dollars in repair bills. Only 75c, postpaid.

## VISKLAMP

Here is a fastener that really works on Polyethylene. Many farmers use Polyethylene as covers for haystacks, silage, etc. The problem has always been to tie down securely. Visklamps eliminates this. Saves wind whipping and ripping. Priced at only \$1.49 per doz., postpaid.

## RANDOX

This is the product that all farmers have been waiting for. Put out by one of the leading manufacturers of farm chemicals, the Monsanto Chemical Company. It is a selective grass killer used as a pre-emergent spray. Your crop seedlings go up right through it but grassy weeds (and some broad leaves) die. With a Randox treatment at the same time you plant, you can save at least one cultivation. Randox works even on clay loams, silt loams, and muck soils, under heavy rainfall. Randox is recommended for Hybrid seed corn, field corn, sweet corn, pop corn, soybeans, lima beans, snap beans, onions, and canning peas. Randox will not build up in your soil and therefore there is no danger of following crops being stunted. It will not harm surrounding crops if the spray drifts. It is easy to apply, requires little agitation in the spray tanks. Can be applied at the same time you plant your crops, either on an overall application or on band treatment.

## RANDOX KILLS . . .

Annual blue grass, barnyard grass, jeep grass, crab grass, sand burrs, giant foxtail, yellow foxtail, green foxtail, goose grass, water grass, pig weed, carpet weed, slink grass and wild oats.

Make your plans for seeding and spraying early. Order now. One gallon container, \$12.62; 5 gallon container, \$59.40, both postpaid.

## SPRING PASTURE

For sweet smelling silage that is more appetizing and nutritious with higher vitamin content

Spring pasture gives a spring fragrance and taste appeal to silage without chemical bitterness. Cattle eat more without waste. It eliminates "silo-stink" by deodorizing contaminating odors. Helps protect milk products, clothing, barns and surroundings from objectionable odors.

Spring pasture inhibits oxidation that destroys vitamins. Experiments have shown up to 17% more Vitamin E and 6% more protein than untreated silage. Spring Pasture also makes poor quality grains, hay or roughage more palatable.

A little goes a long way. You use only one pound of Spring Pasture per ton in grass legume silage, 1/2 to 3/4 pound per ton on corn or other silages. It's safe, pleasant, and easy to use. Non-irritating, non-gaseous, non-toxic. Safe for human or livestock use as directed on containers. Just spread it over the crop when it goes into silo. Another excellent use is to mix 1 pound Spring Pasture with 4 pounds salt, spread over a ton of hay when stored. You flavor and protect mixed feeds by using 1 pound of Spring Pasture per ton. (For high fat feeds 2 pounds per ton.)

Every pound of Spring Pasture you use will pay you a handsome profit. Get your neighbor to order with you and get quantity discount.

Delivered price: 1 lb. can, \$1.50; 25 lb. bag, \$25.00. Economical to use and it does a tremendous job. It will make you money.

## BERRY'S WILD BIRD FEED and FEEDERS

"Berry's Wild Bird Banquet" is a mixture of seeds that attract most Wild Birds. It is not a cheap mixture of cracked corn and discarded seed but is made of highest quality seeds of Sunflower, Millet, Oat Groats, Rape, Canary, and Buckwheat. You really give your friends a feast when you put out Berry's Wild Bird Banquet.

Most of the items on pages 22, 23, and 24 may also be secured at our Retail stores, listed on page 5 of this catalog. The Berry Seed Company has attempted to choose articles that are high in quality to offer its customers. If

## ALL PURPOSE RUBBER SNUBBERS Keep Your Tarps Tight

This item has many uses throughout the farm and industry field. If you are a truck owner, you will find that using Rubber Snubbers to tie down your tarps will save you money in tarp damage. When canvas or rope gets wet and then dries it has a tendency to shrink. If you have your tarps tied down tight, then this shrinking process will rip your tarps. If you use Rubber Snubbers, which are made with 100% rubber, there will be a certain amount of give, therefore reducing any tearing possibilities. They are easy to use and have thousands of different uses. Use on wagon boxes, hay racks, boat covers, dock anchors, airplane snubbers — anywhere where you want to keep a tight hold yet have a small amount of give. Rubber Snubbers have strong steel hooks at each end as illustrated to the right. Tarp Tethers, as illustrated to the left, are made of all rubber with rubber loops at each end. Prices on the 2 1/4" Rubber Snubbers and the 10" Tarp Tethers — Less than 12, \$1.15; 12 to 50, 90c; 50 to 100, 65c; 100 or more, 55c, postpaid. Price on the 3 1/4" Rubber Snubbers — Less than 12, \$1.70; 12 to 50, \$1.35; 50 to 100, 98c; 100 or more, 82c. All postpaid.

## KING SIZE SWEEP RAKES

Here is an entirely new item that is desired to make life easier for you. This Gardex lightweight sweep rake does the job of three ordinary sweep rakes, yet it weighs no more than a bow rake. The handle, head and braces are gold anodized aluminum with rubber grip handle. The tempered spring steel tines are individually anchored in special formed aluminum. Available in three widths — 30-inch size at \$7.95; 36-inch size at \$9.95 and the 44-inch at \$9.95, all postpaid.

King-size "wingspread" sheds two rows of grass clippings, easy to store—just hang up on the wall.

## ICE CREAM FREEZERS

Everyone likes ice cream. Here is an all new ice cream freezer either in the hand operated or electric models that everyone will want to own. It is made of fiber glass. It has a fiber glass tub which can't leak, can't warp, can't get out of shape, and can't lose its gleaming modern beauty. Easy to use, modern, and easy to operate. Makes ideal family gift for any occasion. Four quart hand operated \$14.95, postpaid; four quart electric \$30.75, postpaid. If interested in larger or smaller capacities, write Berry Seed Company, Service Department.

you would wish any additional information on any of the above items, write to the Berry Seed Company Service Department. Most of the items listed are prepaid to you which means added savings.

# ALL IN ONE GARDEN SUPPLIES

## RABBIT REPELLENT

Here is a product that really works. Apply a coating of rabbit repellent to a height that the rabbits may reach after a heavy snowfall. It protects dormant deciduous trees and shrubs from all rabbit damage. Five oz. size, \$1.25 ea.; 12 oz. size, \$2.50 ea., postpaid.

## 6% CHLORDANE

Six per cent Chlordane Dust is an effective control of ants out-of-doors or in the home. Also used for roaches and silver fish. Higher concentration than 6% Chlordane is not recommended for use inside the home. 8 ounce squeeze duster \$9.95; 2 lb. bag \$1.99, postpaid.

## FLORAL DUST

Floral Dust is a versatile mixture which can be applied as a dust or in water to control the destructive insects and diseases that attack plants in the home flower garden. It may also be used on roses and geraniums. 8 ounce squeeze duster \$1.19; 2 lb. bag \$2.25, all postpaid.

## VEGETABLE DUST

This is a special combination of insecticides and fungicides for destroying most of the insects and diseases in the vegetable garden. It can be used as a dust or as a spray when diluted in water. Ingredients were chosen as safer on food crops. 8 ounce squeeze duster \$1.19; 2 lb. bag \$2.25, all postpaid.

## TOMATO DUST

Tomato Dust is designed to protect tomatoes from insects and diseases. Also used to control certain pests and diseases attacking potatoes and peppers. Food crop safety given high consideration in the choosing of the ingredients. 8 ounce squeeze duster \$1.10; 2 lb. bag \$2.25, all postpaid.

## FRUIT TREE SPRAY

Fruit Tree Spray may be used on fruits such as apples, cherries, grapes, peaches, pears, plums and strawberries. Designed to simplify the control of many insects and diseases attacking the home fruit orchard. For best results spray should be applied at regular intervals in the season. 1 lb. canister \$1.95, postpaid.

## BORDEAUX MIXTURE

Standard copper fungicide. Contains 50% copper sulphate, 50% lime. Controls many diseases of fruit trees, grapes, potatoes, flowers, and shrubs. Repels leaf hoppers and flea beetles. 1 lb. size, 96¢ postpaid.

## ARSENATE OF LEAD

Standard control for eating insects damaging fruit, shade trees, vegetables, tobacco, berry bushes, vines, etc. Also for grub proofing, lawns, golf courses, etc. Recommended for crab grass control. 1 lb. carton \$1 ea., postpaid.

## LAWN SWEEPER

This is a product that every home owner has a secret desire to own. We have chosen this new model because of its many outstanding features such as no bending, no stooping, and sweeps the leaves, debris, twigs, paper, as you walk. Also, it aerates the lawn and has a new slow-away storage feature that permits it to be folded flat so that it can be hung up back out of the way. It has positive gripping 1 1/2" x 10" semi-pneumatic rubber tires with a comfort high handle which is spring supported for sweeping ease. Has a full 20-inch sweeping width. The brush reel spins on frictionless ball bearings and it is an all around product that will keep your lawn clean and beautiful in appearance throughout the entire year. Comes shipped to you fully assembled in a self-sealing carton priced at only \$35.00, postpaid.

## WEEDEZ WONDERBAR Kills Weeds the Easy Way

It is easy, safe and efficient to use. Weezez Wonderbar is formed of wax and impregnated with the highly efficient weed killer, 24D. All you have to do is drag the wax bar across your lawn and it deposits a thin film of wax that cannot be blown off or washed off by rain. Kills dandelions and all susceptible broad leaf weeds. It is safe for humans and pets and you completely eliminate the danger of drift due to the wind. Can be tied behind a lawn mower for an efficient kill of all broad leaf weeds in 10 days to 2 weeks. Comes in either the Wonderbar at \$4.98, postpaid, or the Weezez Wonderstick at \$2.98, postpaid.

## Plant Your Garden Early - Use JIFFY POTS

Made of pressed peat unusually strong. The roots grow right through the pot - no messy job of pot removal. Plants start faster and faster, no transplanting shock to the plant. Government tests prove that jiffy pots grow better plants, faster and easier. Plant food is in the pot walls and the peat improves your garden soil. This eliminates setbacks in transplanting. Saves labor and positively no odor. Package 2 doz. 2 1/4" jiffy pots \$8.95; or 25 3" jiffy pots, \$1.50, all postpaid. For larger quantities, write for quotation.

## WOMEN'S HOME and GARDEN GLOVES

Floral pattern, cotton flannel, hand top, elastic at back of wrist. Each 59¢; 6 pair \$2.99, all postpaid.

## LADIES WHITE GOAT GLOVES

Clute Cut, hand top, full white goat leather, tanned with natural lanolin. Sizes available 7, 7 1/2, and 8. Each \$1.49; 6 pair \$8.99, postpaid.

## GARDEN HOSE

Everyone has a need for a good garden or utility hose. This double extruded full 1/2" interior diameter, opaque green Vinyl plastic hose delivers 10 gallons per minute. It is strong and sturdy and exceeds the standards set forth by the Society of Plastic Industry, Incorporated. It also bears the seal issued by the United States Department of Commerce. Each hose has a solid brass full flow coupling attached. Priced for the 25 ft. at \$2.99, 50 ft. \$4.99, and 75 ft. at \$6.99, all postpaid.

## ALL PURPOSE SPRAYER

This is an ideal multi-purpose sprayer for the numerous spraying tasks of the urban dweller, florist, nurseryman, truck farmer, livestock and poultry producer. It is a high pressure mobile unit. Has the capacity of 10 gallons and handles all types of liquid fertilizers for pests and weeds. Comes equipped with 15 feet of hose plus a high pressure pump and spray gun, permitting the spraying of fruit and shade trees, lawn fertilizing, and root feeding. It is powered by 2 1/4 horsepower 4 cycled, air-cooled motor with recoil type starter. Easy to handle and easy to use. A real quality product. Priced at only \$139.00 each. Freight paid.

## FERTILIZER-INSECTICIDE SPRAYER

With this sprayer you can apply liquid or semi-soluble fertilizers and at the same time eliminate the danger of burning even on the hottest days. Also applies insecticides. You put the fertilizer in the jar, attach the sprayer to your garden hose and the water from the hose dilutes the fertilizer properly and spreads it evenly. Priced at \$5.95, postpaid.

to your garden hose and the water from the hose dilutes the fertilizer properly and spreads it evenly. Priced at \$5.95, postpaid.

## RA-PID-GRO

Analysis 23-21-17, the completely balanced liquid plant food. Ra-Pid-Gro is in dry crystal form and must be dissolved in water before use. For outdoor feeding 1 lb. can makes 30 gallons.

House plant feeding 1 lb. instructions on package. Ideal for use with sprayer above. 1 lb. can, \$1.30; 5 lb. can, \$4.75, postpaid.

## GILMORE HOSEMASTER

The world's best

hose nozzle - exclusive pistol grip control. For homes, gardens, car owners, service stations, garages, and industry. Leak proof, clog proof. Completely adjustable to any kind of spray or stream of water you desire. \$1.50, postpaid.

## CRAB GRASS KILLER

## ALL-AMERICA SELECTION

### SEMINOLE BEAN

#### GREEN POD BUSH ALL-AMERICA SELECTION

Pods are long, straight, slender of attractive emerald green color, and stringless, with excellent bean flavor.

Plants upright, sturdy, resistant to mildew, rust, and common bean mosaic. Excellent for freezing. No. 169—Pkt., 20c; 1/2 lb., 45c; 1 lb., 80c; 3 lbs., \$2.20, Postpaid.

### RUBY LETTUCE

Ruby Lettuce is a truly beautiful salad lettuce with its fancy frilled leaves of an intense red color. Color holds in warm weather when other red varieties fade. A loose-leaf type, heat resistant and slow to bolt. Leaves are sweet and succulent when young.

No. 341—Pkt., 15c; 1/2 oz., 45c

### HYBRID FI - NO. 7

New outstanding variety with medium thick, large spreading leaves, and very tender. Bright green. If you like spinach, you will want this one in your garden. No. 586—Pkt., 15c; oz., 25c; 1/4 lb., 75c; 1/2 lb., \$1.25; 1 lb., \$2.00, Postpaid.

### TOMATOES

#### SAH MARZANO

Deep red in color. Rather cylindrical with flatish sides, stump ended. For making tomato paste, puree catsup and canning whole. Plant is vigorous and rather open.

No. 653—Pkt., 15c; 1/2 oz., 55c

### SMOOTHIE CUCUMBER

#### ALL-AMERICA SELECTION

The cucumber that is really different. It is wartless, and spineless, really smooth. Rich dark green skin that stays green. Excellent for slicing. No. 242—Pkt., 15c; 1/2 oz., 25c; 1 oz., 40c, Postpaid.

### CHAMPION RADISH

#### ALL-AMERICA SELECTION

Bright cherry red. Pull it small or let it grow as big as a dollar, and it will still be crisp, and solid. A winner for the home garden. No. 531—Pkt., 15c; oz., 40c, Postpaid.

1 PKT. EACH of the above 6 VARIETIES (95c value) for 75c, Postpaid. ORDER NO. 50X.

## PORTABLE GREENHOUSE

Enables you to be as much as 6 weeks ahead of the planter using ordinary methods. Wonderful for starting potted plants and most other plants and flowers outside. Enables the sun rays to enter, but keeps out frost and cold. Will last many years. Will not crack or peel. 5 ft. length, \$1.95. Postpaid.

## GARDEN-LIFE

GIVES MORE PLANT FOOD PER DOLLAR. GARDEN-LIFE is a high analysis (10-52-17) all soluble plant food plus a root-developing hormone. Total plant food content is a maximum 79%. It is completely, and instantly, soluble; therefore the plant food elements are immediately available to the roots. Plants fed with GARDEN-LIFE respond very rapidly; new growth is visible in a very short time. Houseplants, too, thrive and attain vivid beauty when fed with GARDEN-LIFE. African Violet growers report blooms as big as silver dollars. Postpaid: 2 oz., 25c ea.; 5 oz., 50c ea.; 14 oz., \$1.00 ea.

# BERRY'S SEEDS

## GRO-COATED

## FOR LARGER YIELDS AND BETTER QUALITY

# Fine EVERGREENS At Low Cost

## JUMBO EVERGREENS

### FOR LANDSCAPE PLANTING!

Shapely evergreens for immediate effects in landscape planting. All shipped prepaid and each tree with its own ball of Peat Moss. 1 ft. Trees.

Each \$1.98; 2 for \$3.49; 4 for \$5.95

**PFITZER'S JUNIPER**—Gracefully arching branches. Dark green. One of the best of spreading evergreens. UPRIGHT YEW—Same foliage as upright Yew, but spreading in habit. All Yew love and thrive in partial shade.

**BLACK HILLS SPRUCE**—Compact, dark-bluish green. A real asset to any landscape planting.

**PYRAMIDAL ARBOR VITAE**—Rich green color. Naturally grows compact, tall and narrow.

**AMERICAN ARBOR VITAE**—The best for hedges, specimen planting or background groups. Grows fast.

## 100 EVERGREEN SEEDLINGS

Our favorite collection containing the best varieties. An ideal combination for any windbreak. These seedlings are easy to start and cost less than 5c each.

25 Colorado Blue Spruce, 25 Norway Spruce, 25 Juniperus Virginiana, 25 Scotch Pine. All 100—3 to 6 inch seedlings. NO. 722—\$6.50. Postpaid.

## COLORADO BLUE SPRUCE

Now you can have America's favorite of all ornamental evergreens in your lawn—famous Colorado Blue Spruce. We are fortunate in being able to offer you this variety at a low price. These 4 year old transplants 10-12 inches tall can be set in a permanent location. If you have room for a larger planting, order two or more collections. NO. 725—1 collection of 4 trees, \$3.65; 2 collections, \$7.00. Postpaid.

## SPECIAL XMAS TREE COLLECTION

25 Million Christmas trees are used in this country annually. We grow large quantities of transplants for this purpose, and can supply trees at reasonable prices.

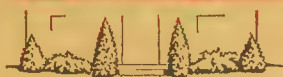

25 Scotch Pine, COLLECTION NO. 700—2 Yr., 3-6 inch seedlings, 100 Trees, \$6.50, Postpaid.  
25 Austrian Pine  
25 Norway Spruce  
25 Austrian Pine

See Page 4 for Discounts

AMERICAN ARBOR VITAE

## A DOORWAY Planting

This collection includes 2 Pyramidal Arbor Vitae for the foreground 1 to 1 1/2 ft. Size; 2 Pfitzer's Junipers for the side 9 to 12 inch size; and 2 Globe Arbor Vitae for the background 8 to 10 inch size. Start landscaping your home now. Directions for planting enclosed with each order.

NO. 726—6 trees, 2 of each, \$5.95. Postpaid.

**\$1.00 SPECIAL \$1.00**

The Evergreen bargain of the season. 5 Norway Spruce, 5 Colorado Blue Spruce, 10 Scotch Pine, 20 trees Northern Grow, 3 to 6 inch seedlings. A great value. NO. 745—\$1.00. Postpaid.

## EVERGREEN Seedlings & Transplants

The seedlings are smaller and are less in price. The transplants get you off to a faster start. Both are big values. Well rooted to make rapid growth. Each shipment carefully packed. Shipped express or parcel post, all charges paid.

Each 3 for  
3 to 4 ft. .... \$1.95 \$5.55

## SEEDLING TREE WINDBREAKS

Our tree seedlings are well rooted, hardy and vigorous. They are easy to start, planting instructions being furnished. We ship prepaid at proper planting time early in the Spring and guarantee satisfaction.

We suggest planting all sizes of tree seedlings in rows where it is convenient to cultivate them often the first two or three years—rows about 36 inches apart with the seedlings 12 to 24 inches apart in the row—they grow more bushy when planted 24 inches apart. After 2 years, when the trees are well rooted and about 5 feet tall, transplant into permanent location.

### ALL NURSERY PRICES ARE PREPAID

Berry's guaranteed nursery stock is grown by experts, wherever possible in northern sections for extra-hardiness. Transplanted, pruned and root pruned, to insure sturdy, well rooted, well branched plants that will thrive anywhere.

#### LIBERAL GUARANTEE

Berry's guarantee all their Nursery Stock to be as good or better than described and to reach you in proper planting condition. If not, we will replace it free of charge but you must notify us within 45 days after you receive it. Our Nursery Stock is guaranteed true to name. If otherwise we will replace such stock free or refund the exact amount paid but you should notify us the first blooming or fruiting season. Vigorous growth depends upon proper planting, pruning, soil, climatic conditions and other factors we cannot control. Berry's low prices do not start growth, we will share the loss with you by replacing such stock at half the catalog price. To take advantage of this liberal offer, you must notify us before August 1st, next. The half price replacement will be shipped prepaid during the next planting season.

# Fast Growing HEDGES

**IMPORTANT:** Your hedge will never be tight, close to the ground unless you prune it severely immediately after planting. Always prune off at least 1/2 of the top branches. Smaller sizes should be left only about 4 to 6 inches taller than ground — larger sizes about 10 to 12 inches.

ALL HEDGES AVAILABLE FOR SPRING, OR FALL, EXCEPT RED GROOTENDORST, SPRING ONLY.

**NO. 5506—PRIVET, AMOOR RIVER NORTH.** Most popular hedge plant Hardy Russian Privet. Dense, glossy green foliage on numerous upstanding branches. Can be kept pruned down to a thick hedge only 2 feet high or will grow over 4 feet if not pruned.

	10	25	50
18" to 24".....	\$2.50	\$5.65	\$9.95
12" to 18".....	1.95	4.35	7.95

**NO. 5518—RED GROOTENDORST ROSE HEDGE.** Beautiful Cherry-Red blooms from early summer to frost. Very hardy. Thrives even under adverse conditions. May be pruned for low growth or let grow to full height of 4 to 5 ft. Blooms well at any height.

	5	10	25
12" to 18".....	\$4.00	\$7.50	\$17.50

**NO. 5505—BARBERRY—GREEN.** A very compact, dense growing, thorny, protective Hedge. Can be kept pruned to 2 feet or allowed to grow to 4 feet. In Fall, the leaves turn red and bright red berries appear.

	10	25	50
18" to 24".....	\$3.25	\$7.50	\$14.50
12" to 18".....	2.45	5.50	9.75

## Chinese Elm Hedges, See No. 5600 in Seedling Group

**NO. 5511—SPIREA V.H. BRIDAL WREATH.** One of the most beautiful Hedges — in the spring, its graceful arching branches are a mass of lovely white bloom. Very hardy, grows to 4 to 6 ft. high. Prune very severely when planted, but after the first year, prune out only the dead wood.

	10	25	50
18" to 24".....	\$3.25	\$7.50	\$14.50
12" to 18".....	2.50	5.75	10.25

A fine selection for your home garden. Big yielders of delicious red and black raspberries. Each patch includes 10 each Latham, Indian Summer, Sodus and Cumberland.

## SHIPPED PREPAID

We ship Nursery stock by Prepaid Parcel Post whenever possible. Some trees are too large for Parcel Post and are shipped Prepaid Express. Give your nearest Express Office address when ordering large sizes.

# Plums Cherries

EVERY HOME  
SHOULD  
HAVE SOME

Available for Spring or Fall Shipment

2 YEAR \$1.40 In Lots of  
3' TO 4' EACH 4 or More

## European and Japanese Group

These favorite varieties are not as hardy as American varieties so they are especially suited for states east of Illinois. Fine for eating or market. Plant at least 2 for proper cross pollination.

**NO. 6506—ITALIAN BLUE PRUNE.** Old favorite Italian dark blue Prune Plum. Juicy and well flavored. Excellent for eating fresh or canning. Not used for jelly.

**NO. 6507—GREEN GAGE.** Large sweet yellowish green fruit. Juicy and tasty for eating fresh or canning. One of the best late Plums. Stemmy clingstone.

**NO. 6508—STANLEY PRUNE.** The most profitable Plum for Commercial or Home Orchard. Earliest, hardest European variety. Consistent bearer of large, blue, richly full flavored fruit. Freestone, sub-acid.

## HOME PLUM ORCHARD

A selection of three hardy plums for eating, home canning and preserving. Selected to insure proper pollination and long season bearing. 1 each of Toka, Underwood Red Wing. Read description at right. Prepaid prices:

# BLUEBERRIES

Available for Spring Only

Grow these large sweet, tasty Blueberries in your own garden. Have plenty of luscious berries for your table, for pies, muffins, etc. Thrives best in a moist, acid soil. If your soil is sweet, you can easily acidify it by the use of peat moss or partially rotted vegetable matter around the plants. The bushes grow 3 to 4 ft. high and should be planted 4 ft. apart in the home garden. Plant at least two varieties for the best fruiting.

NO. 6402—EARLY ELBERTA. Freestone. Large golden yellow with red cheek. Yellow flesh, firm. Juicy, luscious flavor. Earlier than Elberta.

NO. 6403—ELBERTA. Best known freestone, commercial variety. Yellow with reddish cheek. Excellent for canning.

NO. 6405—GOLDEN JUBILEE. Yellow freestone. Firm, juicy. 15 to 20 days earlier than Elberta.

NO. 6406—HALE HAVEN. Best early freestone. Strong grower, very hardy — heavy bearer of fine flavored yellow peaches.

NO. 6407—J. H. HALE. Earlier and larger than Elberta. Unusually fine flavor. Good yellow with red blush. Good keeper. Plant with other varieties.

NO. 6413—POLLY. A very fine white freestone peach. The fruit is large, blushed and ripens just before Elberta. The flesh is juicy white but firm. Rich delicious flavor. It bears young and is a heavy, consistent bearer. An excellent peach for all-around home use and for local markets. A self pollinizer. One of the hardiest peaches!

NO. 6415—RED HAVEN. The peach with all the "extras" — Extra early, extra hardy, extra juicy, extra red, and extra heavy bearer. New and highly recommended.

GIANT SIZE: NO. 6460—ELBERTA; NO. 6463—HALE HAVEN; NO. 6465—POLLY

# NEW for 1959

THE LATEST FROM OUR GARDEN & NURSERY DEPARTMENT

## RICH HAVEN PEACH

Trees vigorous and productive. Fruits are large, nearly round, and uniform in size and shape. Color is bright golden, overlaid with a large, bright red blush on the area exposed to the sun, with stripes of red and gold on the opposite side. Very attractive in appearance. Flesh is clear yellow with a moderate amount of red near the pit. The stone is entirely free, even when the fruit is firm ripe. Two to three days earlier than Hale Haven.

No. 6408—5/16"–2/3 ft., Each 95c  
9/16"–4/5 ft. Each \$1.65

## COLETTE EVERBEARING PEAR

**Delicious Flavor.** Fruit firm, free from "grit," does not rot at core when fully ripe. Fruit medium to large, excellent for canning, eating, marketing. Very hardy. Blooms at normal blooming season and then keeps on blooming and bearing new pears on the new growth for most of the summer.

No. 6212—11/16"–5/6 ft. Each \$3.75

## CARPATHIAN ENGLISH WALNUT

A hardy strain of English Walnut! Flavorful, crisp nutmeats with thin shell like regular English Walnuts. Easy to crack with tasty meats, just a little smaller than grafted English Walnuts but equal in quality. Plant two for proper pollination. Now you can grow English Walnuts in all but the extreme cold states like Minnesota, Dakotas, etc.

No. 6882—2 to 3 ft., each \$3.95;  
4 or more @ \$3.75 each

## SIX IN ONE THE ONE TREE ORCHARD

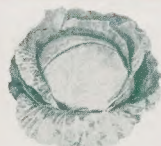

Red Jonathan, Yellow Delicious, Crimson Wine Sap, Beacon, and Yellow Transparent budded on Red Delicious. Six popular varieties. Have fresh fruit all season.

We offer this one tree orchard for the customer with a limited space for planting. Requires only about 18 to 20 feet of space when full grown. Vigorous and hardy. Fruit is of the same high quality.

No. 6130—9/16"–4/5 ft. Each \$4.35, Postpaid.

## NEW HYBRID CABBAGE

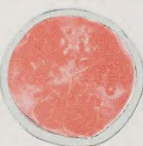

**C C CROSS.** The first extra early hybrid. Very uniform with fewer outer leaves. Plants compact and short stemmed. A beautiful, round head of about 3 lbs. with clear white interior. For spring sowing only.

No. 198—Pkt., 25c; 1/2 oz., \$1.00, Postpaid.

## WATERMELON

**SUGAR BABY.** New icebox variety. Early maturing, 6 to 8 lbs., round, hard, firm, and black green in color with faint darker stripes. Flesh dark red, flavor excellent. Free from White Heart. Very attractive when cut. Seeds few and quite small, dark brown in color.

No. 359—Pkt., 15c; oz., 40c, Postpaid

## BEE T RUBY QUEEN

**1958 AAS Bronze Winner.** An excellent new, early bunching beet, ideal for market display. Root is round and smooth, washes to an attractive bright red color. Interior color is uniform medium bright red. Flesh texture is unusually fine, butter-smooth in appearance. Tops are short (only 10" to 12"). No. 156; Pkt., 15c; oz., 40c.

## BEAN PEARLGREEN

**1958 AAS Silver Medal Winner.** This outstanding new bean is adapted from East to West Coasts and from Mexico into Canada. Seed is pure white, slightly smaller than Tendergreen, and slow developing. Pods are neat, smooth, bright green, round and very meaty. Plants have medium height, good spring vigor. No. 131; 1/4 lb., 25c; 1/2 lb., 45c; 1 lb., 80c.

## Hybrid Nanking CHERRY

University of Minnesota selection from North China's hardy cherries. Graceful 7 foot shrubs, radiant with bloom in Spring, followed by long ropes of bright red fruit of true cherry flavor by mid-July. Makes tasty pies. Often bear second year. No. 6848 Grade: 18/24", \$1.60 each; 3 for \$4.50.

## JUNE BERRY

Fruit somewhat resembles Blueberry. Pies made from it have a flavor similar to Blueberry. BUT — you can grow Juneberry quickly and easily. No special care or soil conditioning. Super-hardy, fast-growing, thrives in any soil. Its beautiful white blossoms, its red berries which turn blue when ripe, make this plant highly ornamental as well as useful. Order at least 2 plants to insure setting of fruit. No. 6851 Grade: 18/24", \$1.25 each; 3 for \$3.45.

## Dwarf FRUIT TREES

Here is the answer for the small home orchard, or city dwellers, with small back yard space. Dwarf trees require only about 12 foot of space, and you don't need a ladder to pick the fruit.

Trees often bear the second year after planting. Enjoy their beauty and delicious fruit.

### DWARF APPLES

**NO. 6145—RED DELICIOUS.** Planted from coast to coast.

**NO. 6149—RED JONATHAN.** This apple can't be beat for flavor.

**NO. 6147—McINTOSH.** Juicy and well flavored.

**NO. 6148—TRANSPARENT.** No other variety makes such sweet apple sauce. Ripens in early July.

11/16" Caliper—4 1/2 to 5 ft., \$3.95 each; 4 or more \$3.75 each

### NEW DWARF RICH SOUR CHERRY

Grows to only 5-6 foot tall, making a bushy plant, almost as wide as it is tall. Bright red, high quality fruit. Attractive masses of white blossoms in the spring. 15-18 inches high. 5/16" trunk diameter. No. 6376, \$2.75 each.

### NORTH STAR DWARF PIE CHERRY

Large dark red fruit, tart flavor. Very hardy. Bears young and heavily. Self-pollinating. No. 6374: 7/16", 2 1/2 feet, \$1.95 each.

## JONADEL APPLE

This is a new Apple being introduced by Iowa State College this Spring. A Jonathan Red Delicious cross. Beautiful dark red fruit, same shape as Jonathan but slightly larger. Flavor is a little milder than Jonathan but more acid than Delicious. A winter Apple that stores better than Jonathan. It is a little harder than either Delicious or Jonathan. Supply limited. No. 6121 Grade: 11/16" – 5/8", each, 4 or more, \$2.60 each.

### DWARF ELBERTA PEACH

Deep golden skin, blushed carmine red. Flesh is golden rich flavor, firm and fine texture. Same as the regular Elberta. Free-stone No. 6440—7/16" Caliper—2/3 ft., \$2.65 each, 4 or more, \$2.50 each.

### DWARF POLLY PEACH

A very fine white freestone peach. Fruit large, rich, and of delicious flavor. A heavy, consistent bearer. No. 6441: 7/16" Caliper—2/3 ft., \$2.65 each; 4 or more, \$2.50 each.

### DWARF BARTLETT PEACH

Heavy bearer of large, juicy, high flavored fruit. No. 6215: 9/16" Caliper—3/4 ft., \$3.15 each; 4 or more, \$3.00 each.

### DWARF KIEFFER PEACH

Tree extra hardy, blight resistant, and bears young. No. 6217: 9/16" Caliper—3/4 ft., \$3.15 each; 4 or more, \$3.00 each.
